CONSULTING, LLC

May 31, 2013

## ABOUT VERITÉ HEALTHCARE CONSULTING

---

Verité Healthcare Consulting, LLC (Verité) was founded in May 2006 and is located in Alexandria, Virginia. The firm serves as a national resource that helps hospitals conduct community health needs assessments (CHNAs) and develop implementation strategies that address priority needs. The firm also helps hospital associations and policy makers with community benefit reporting, planning, program assessment, and policy and guidelines development. Verité is a recognized, national thought leader in community benefit and in the evolving expectations that tax-exempt healthcare organizations are being required to meet.

The CHNA prepared for Inova Fair Oaks Hospital was directed by the firm's president and managed by a senior-level consultant. Associates and research analysts supported the work. The firm's president, as well as all senior-level consultants and associates, hold graduate degrees in relevant fields.

More information on the firm and its qualifications can be found at [www.VeriteConsulting.com](http://www.VeriteConsulting.com)

---

*Verité Healthcare Consulting's work reflects fundamental concerns regarding the health of vulnerable people and the organizations that serve them*

## INTRODUCTION

---

This community health needs assessment (CHNA) was conducted by Inova Fair Oaks Hospital (Inova Fair Oaks or the hospital) because the hospital wants to understand better community health needs and to develop an effective implementation strategy to address priority needs. The hospital also has assessed community health needs to respond to community benefit regulatory requirements.

Federal regulations require that tax-exempt hospitals provide and report community benefit activities and programs to demonstrate that they merit exemption from taxation. As specified in the instructions to IRS Form 990, Schedule H, community benefits are programs or activities that provide treatment and/or promote health and healing as a response to identified community needs.

Community benefit activities or programs seek to achieve objectives, including:

- improving access to health services,
- enhancing public health,
- advancing increased general knowledge, and
- relief of a government burden to improve health.<sup>1</sup>

To be reported, community need for the activity or program must be established. Need can be established by conducting a community health needs assessment.

The 2010 Patient Protection and Affordable Care Act (PPACA) requires each tax-exempt hospital to “conduct a [CHNA] every three years and adopt an implementation strategy to

meet the community health needs identified through such assessment.”<sup>2</sup>

CHNAs seek to identify priority health status and access issues for particular geographic areas and populations by focusing on the following questions:

- **Who** in the community is most vulnerable in terms of health status or access to care?
- **What** are the unique health status and/or access needs for these populations?
- **Where** do these people live in the community?
- **Why** are these problems present?

The question of **how** the organization can best use its limited charitable resources to address priority needs will be the subject of the hospital’s Implementation Strategy.

This assessment considers multiple data sources, including secondary data (regarding demographics, health status indicators, and measures of health care access), assessments prepared by other organizations in recent years, and primary data derived from a community survey and from interviews with persons who represent the broad interests of the community, including those with expertise in public health.

The following topics and data are assessed in this report:

- Demographics, e.g., numbers and locations of vulnerable people;

---

<sup>1</sup> Instructions for IRS Form 990, Schedule H, 2012.

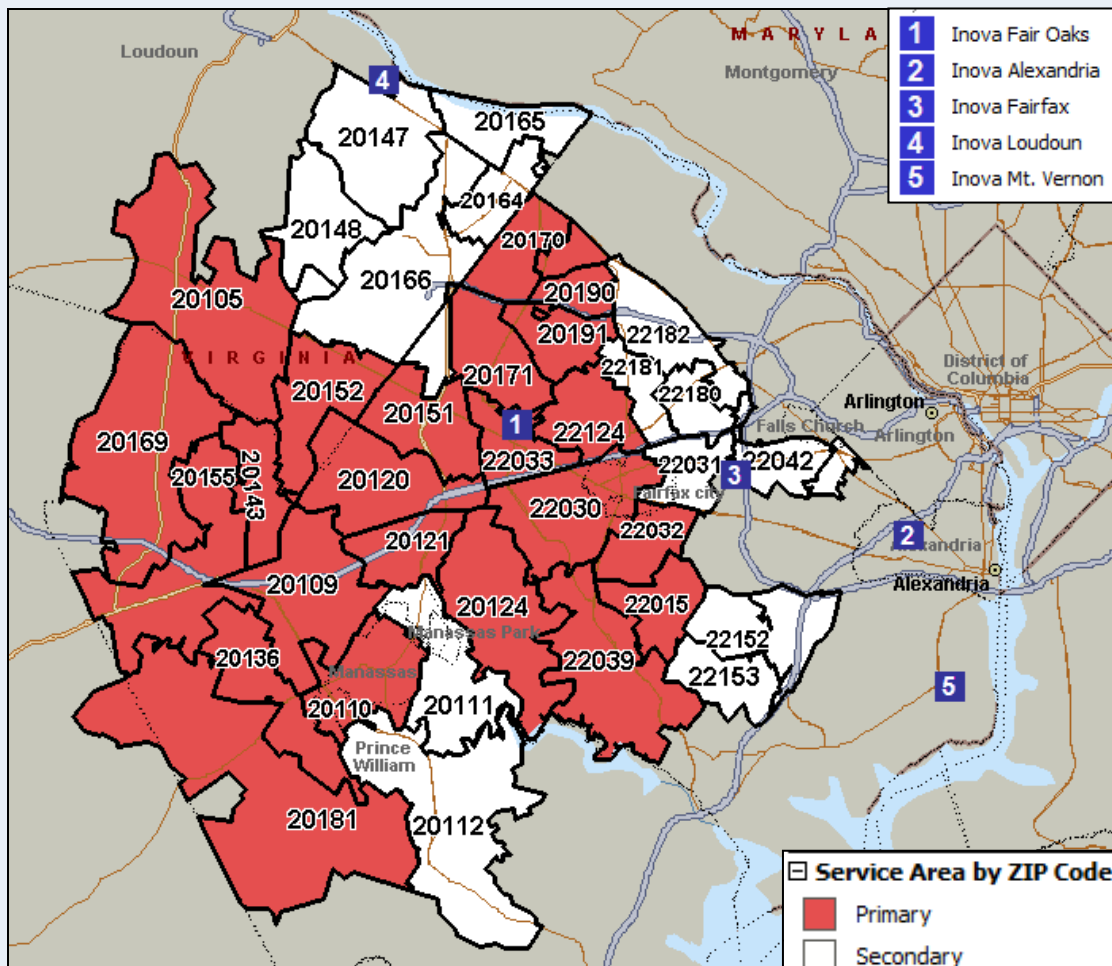

---

<sup>2</sup> Patient Protection and Affordable Care Act.

- Economic issues, e.g., poverty and unemployment rates, and impacts of state or local budget changes;
- Community issues, e.g., homelessness, housing, environmental concerns, crime, and availability of social services;
- Health status indicators, e.g. morbidity rates for various diseases and conditions, and mortality rates for leading causes of death;
- Health access indicators, e.g., uninsurance rates, discharges for ambulatory care sensitive conditions (ACSC), and use of emergency departments for non-emergent care;
- Health disparities indicators; and
- Availability of healthcare facilities and resources.

This assessment identifies a prioritized list of community health needs. Inova Fair Oaks Hospital will be preparing an Implementation Strategy that describes how the hospital plans to address the identified needs.

## EXECUTIVE SUMMARY

### Inova Fair Oaks Hospital Community By the Numbers

- 44 ZIP codes in Fairfax, Loudoun, and Prince William counties and the city of Manassas
- Estimated Population (2012): 1,134,133
- 60% of community population resides in Fairfax County (2012)
- Population change (2013-2018):
  - Growth of 2% overall
  - 8% increase in 65+ population
- Below VA average poverty rates with pockets of low-income people.
- Disparities:
  - Black, Asian, and Hispanic (or Latino) populations more likely to be living in poverty
- Growing diversity:
  - Rapidly growing Asian and Hispanic (or Latino) populations
  - 37% non-White in 2013; 38% non-White by 2018
- 10% of Inova Fair Oaks Hospital discharges for ambulatory care sensitive conditions (ACSC)

In general, the Inova Fair Oaks community benchmarks favorably on a variety of health indicators compared to national and Virginia averages. However, health status and access problems are present and this assessment seeks to identify the most pressing issues.

The community is comparatively wealthy, but problematic health disparities exist for low-income populations and racial and ethnic minorities.

Poverty and unemployment can create barriers to access (to health services, healthy food, and other necessities) and thus contribute to poor health. Although overall the community had lower poverty and unemployment rates than the U.S. average, unemployed, lower-income, and uninsured people are located in the East Fairfax 29/50 Corridor, Manassas, and Reston/Herndon. These areas are home to relatively high proportions of Black and Hispanic (or Latino) residents.

Parts of Loudoun County, Fairfax County, Manassas and Manassas Park Cities, and Prince William County contain federally-designated Medically Underserved Areas and Populations (MUAs/MUPs).

Virginia has enacted budget reductions that affect health and human service providers. These reductions affect children and youth services, aging and elderly services, mental health programs and services, health services for indigent and low-income populations, and public health departments.

Ten percent of Inova Fair Oaks Hospital discharges were found to be for ambulatory care sensitive conditions (ACSC) or potentially preventable if patients were accessing primary care resources at optimal rates. About half are for patients 65 years of age and older; the most common conditions for those patients were: congestive heart

failure, chronic obstructive pulmonary disease, bacterial pneumonia, and urinary tract infection.

## Priority Needs

Poor health status can result from a complex interaction of challenging social, economic, environmental, behavioral factors combined with a lack of access to care is present. Addressing these “root” causes is an important way to improve a community’s quality of life and to reduce mortality and morbidity.

The table that follows describes the health needs identified throughout the assessment as priorities in the community served by Inova Fair Oaks Hospital.

## Access to Health and Human Services

- **Insufficient Collaboration and Coordination Among Organizations Providing Health and Social Services**

Health needs in the community would be better addressed if collaboration among community-wide health care providers, facilities, and agencies providing health and social services were enhanced. Stakeholders expressed a need for comprehensive integration (e.g., primary care and mental health) and coordination of care across (e.g., primary care referrals to specialists) the community-wide system of services and providers. Effective communication and active relationships between these organizations would be beneficial, especially to vulnerable populations.

- **Insufficient Case/Care Management for Seniors - (Fairfax County and Fairfax City)**

Disease management and self-sufficiency education and assistance are needed for the senior population, particularly for those with mental health issues.

- **Lack of Affordable and Accessible Primary and Specialty Care and Insurance**

Low-income and minority populations have difficulty accessing health care services and insurance. Clinics and other community organizations are struggling to meet growing demand. Access to specialty care is particularly problematic for Medicaid and uninsured patients.

- **Lack of Access to Preventive Care**

Residents in Manassas West and Manassas East experience comparatively high rates of ambulatory care sensitive admissions that could be avoided with improved access to primary and preventive care. Some residents, especially low-income and uninsured people, are not accessing these services due to high cost, lack of convenience, or awareness of available services. Community residents experience difficulty accessing services due to gaps in the public transportation system and traffic congestion.

- **Language Barriers and Need for Additional Culturally Competent Care Providers**

Culturally competent health services and health system navigation services are needed with increasing diversity.

## Chronic Disease

- **High Rates of Cancer Incidence and Disparities in Cancer Mortality**

Fairfax County and Fairfax City exhibit comparatively high rates of breast and ovarian cancer. Cancer mortality is comparatively high for the Other<sup>3</sup> (non-White, non-Black) population in Prince William County.

- **Disparities in Chronic Liver Disease and Cirrhosis Mortality**

Chronic liver disease and cirrhosis mortality is comparatively high in the Other<sup>3</sup> (non-White, non-Black) populations.

## Dental Health

- **Lack of Access to Dental Care and Poor Dental Health Status**

Additional, affordable dental care services are needed for low-income, uninsured, and undocumented adults to improve dental health outcomes.

## Health Behaviors

- **Alcohol Abuse**

Efforts to reduce alcohol misuse are needed due to comparatively high rates of heavy drinking.

- **High Rates of Smoking – (Manassas City and Manassas Park City)**

Efforts to reduce the prevalence of smoking are needed, especially among adolescents, young adults, and lower-income populations.

- **Unsafe Sex – (Manassas City and Manassas Park City)**

Efforts to reduce rates of unsafe sex are needed.

---

<sup>3</sup> The “Other” population includes residents who identify as American Indian/Native American, Asian/Pacific Islander, two or more races, or some other race.

## Maternal and Child Health

- **Disparities in Infant Health Outcomes**

Services (including enhanced prenatal care in the first trimester in Prince William County, Manassas City, and Manassas Park City) are needed to reduce the ratios of Black to White infant mortality and Black to White low and very low birth weight infants.

## Mental Health

- **Lack of Access to Mental Health Services and Poor Mental Health Status**

Additional, comprehensive mental health services are needed to address the needs of children/adolescents, low-income and uninsured/underinsured residents, those suffering from stress, veterans, and persons with chronic/severe mental illness.

## Morbidity and Mortality

- **Diet and Exercise-Related Issues**

Poor diet and a lack of exercise contribute to poor health status in the community, particularly the prevalence of obesity/overweight and diabetes, as well as disparities in diabetes mortality.

- **High Rates of Lyme Disease – (Loudoun County)**

Interventions are needed to respond to relatively high rates of Lyme disease in Loudoun County.

- **High Rates of Tuberculosis**

The incidence of tuberculosis is above the Virginia average in the community.

## Physical Environment

- **Poor Air Quality**

The community has comparatively high concentrations of particulate matter and ozone.

- **Poor Community Safety - (Manassas City and Manassas Park City)**

Efforts are needed in Manassas and Manassas Park cities to address community safety issues.

## Social and Economic Factors

- **Basic Needs Insecurity**

The economic downturn, combined with a comparatively high cost of living, has led to difficulties accessing affordable food and shelter, especially for residents of Manassas East. The economic downturn also has led to pockets of unemployment and poverty as well as community concerns about homelessness in Loudoun and Prince William counties.

- **Lack of Health Education**

Increased health education and awareness of existing services is needed in the community, particularly for children and families.

- **Poor Educational Achievement - (Manassas City and Manassas Park City)**

High school graduation rates are comparatively low in Manassas and Manassas Park cities.

# APPENDIX

# METHODOLOGY

---

## Analytic Methods

This Appendix begins by identifying the communities served by Inova Fair Oaks. Findings based on various quantitative analyses regarding health needs in those areas are discussed, followed by a review of health assessments conducted by other organizations in recent years.

The Appendix then presents information obtained from interviews with stakeholders who represent the broad interests of the community, including public health officials and experts, and Inova Fair Oaks-affiliated clinicians, administrators, and staff. Interviews were conducted from March through August of 2012. The assessment also considers information obtained from a public community survey.

Identifying priority community health needs involves benchmarking and trend analysis. Statistics for several health status and health access indicators are analyzed and compared to state-wide and national benchmarks or goals. The assessment considers multiple data sources, including indicators from local, state, and federal agencies. Multiple data sources and stakeholder views are important in assessing the level of consensus that exists regarding community health needs. If alternative data sources including interviews support similar conclusions, then confidence is increased regarding the most problematic health needs in a community.

## Prioritization Process and Criteria

Verité applied a ranking methodology to help prioritize the community health needs identified by the assessment. Verité listed the identified health issues and assigned to each a severity score based on the extent to which indicators exceeded Virginia or U.S. averages. An average severity score was calculated for each category of data (secondary data, previous assessments, interviews, and survey data,) to account for the number of sources that measured each health issue. These averages were assigned a weight: 40 percent, 10 percent, 40 percent, and 10 percent, respectively. A final score was calculated by summing the weighted averages. **Exhibit 1** illustrates this process for three example indicators.

**Exhibit 1: Example Prioritization Process by Data Source and Indicator, Fairfax County**

Data Source	Alcohol Use	Lyme Disease	Language Barriers
County Health Rankings	2	-	-
Community Health Status Indicators Project	-	-	-
Virginia Public Health Data	-	-	-
Healthy People 2010	-	-	-
Behavioral Risk Factor Surveillance Survey	2	-	-
U.S. Census	-	-	2
<b>Secondary Data - Weighted Average (40%)</b>	<b>0.8</b>	-	<b>0.8</b>
Previous Assessments	-	2	-
<b>Previous Assessments - Weighted Average (10%)</b>	-	<b>0.2</b>	-
Interviews	1	2	2
<b>Interviews - Weighted Average (40%)</b>	<b>0.4</b>	<b>0.8</b>	<b>0.8</b>
Community Survey	-	0	2
<b>Community Survey - Weighted Average (10%)</b>	-	<b>0.0</b>	<b>0.2</b>
<b>Final Score</b>	<b>1.2</b>	<b>1.0</b>	<b>1.8</b>

Source: Verité Analysis, 2012.

The methodology thus takes into account both severity scores for each health issue and the number of sources that measure each issue.

**Information Gaps**

No information gaps have affected Inova Fair Oaks’ ability to reach reasonable conclusions regarding priority community health needs.

**Collaborating Organizations**

For this assessment, Inova Fair Oaks Hospital collaborated with Inova Alexandria Hospital, Inova Fairfax Medical Campus, Inova Loudoun Hospital, and Inova Mt. Vernon Hospital.

## DEFINITION OF COMMUNITY ASSESSED

This section identifies the community assessed by Inova Fair Oaks. Verité relied on Inova Fair Oaks' current service area definitions to identify the communities to be assessed. The definitions were based on the geographic origins of hospital discharges.

Inova Fair Oaks' community is comprised of 44 ZIP codes (and 17 subregions) that extend into (and overlap with) the counties of Fairfax, Loudoun, and Prince William, and the city of Manassas (**Exhibits 2 and 3**). The hospital is located in Fairfax County.

### Exhibit 2: Community Population, 2012

Subregion	2012 Population*	Percent of Population 2012
<b>Primary Service Area</b>		
<b>Fairfax County Subregions</b>	<b>448,803</b>	<b>39.6%</b>
Centreville	71,817	6.3%

<b>Combined Service Area Total</b>	<b>1,134,133</b>	<b>100.0%</b>

Total population 2012:  
1,134,133  
...  
60% of the community  
resided in Fairfax  
County

Source: The Metropolitan Washington Council of Governments, 2012.

\*2012 projections based on Verité analysis of 2008 and 2013 population estimates.

In 2012, the Inova Fair Oaks community had a population of approximately 1,134,000 persons. Nearly 58 percent of the population resided in the primary service area (**Exhibit 2**).

Some health indicators only are available at a county-wide or city-wide level of detail. When assessing these indicators, it is important to take into account the percentage of the total community population that resides in each jurisdiction. Residents of service area ZIP codes in Fairfax County represented 62 percent of that county’s population as a whole (**Exhibit 3**). The entirety of Manassas City is encompassed by the service area. The population of service area ZIP codes in Prince William County represented 46 percent of that county’s total population. Accordingly, caution should be used when assessing data available only for Prince William County as a whole.

### Exhibit 3: Community and Jurisdiction Population Overlap

Jurisdiction	Community Population*	Percent of Community Population	Total Jurisdiction Population*	Community Percent of Total Jurisdiction
Fairfax County**	674,381	59.5%	1,083,557	62.2%
Loudoun County	226,299	20.0%	320,160	70.7%
Manassas City	43,326	3.8%	36,626 <sup>4</sup>	100.0%
Prince William County**	190,127	16.8%	416,403	45.7%
<b>Total</b>	<b>1,134,133</b>	<b>100.0%</b>	<b>1,856,745</b>	<b>61.1%</b>

Sources: The Metropolitan Washington Council of Governments, 2012, and U.S. Census Bureau, 2011.

\* Jurisdiction population estimates were based on Verité analysis of data from the U.S. Census Bureau, American Community Survey, 5 Year Estimates 2006-2010. Community population estimates were based on Verité analysis of 2008 demographic data from Inova Hospital System.

\*\* For the assessment, Fairfax County includes Fairfax City; Prince William County includes Manassas Park City. However, some county-level data for these jurisdictions are assessed independently.

The community was defined based on the geographic origins of Inova Fair Oaks inpatients. In 2010, approximately 69 percent of the hospital’s inpatient discharges originated from the primary service area and 62 percent from Fairfax County. The service area collectively accounted for 83 percent of the hospital’s inpatient discharges.

The community definition was confirmed by examining the geographic origin of emergency department encounters. In 2010, nearly 86 percent of Inova Fair Oaks’ emergency department visits originated from its primary and secondary service area (**Exhibit 4**).

<sup>4</sup> Different data were used to calculate community and jurisdiction populations causing the population of Manassas City as a whole to be reported as lower than the population in the ZIP codes in Manassas City served by Inova Fair Oaks. Inova Fair Oaks serves the entirety of Manassas City.

**Exhibit 4: Inova Fair Oaks Inpatient Discharges and Emergency Department Visits, 2010**

Jurisdiction	Percent of Discharges	Percent of ED Visits
<b>Primary Service Area</b>		
Fairfax County	54.7%	65.8%

## SECONDARY DATA ASSESSMENT

This section assesses secondary data regarding health needs in Inova Fair Oaks' community.

### Demographics

Population change plays a determining role in the types of health and social services needed by communities. Overall, the population living in the community is expected to increase 10.7 percent between 2008 and 2013 and is expected to increase by another 2.4 percent between 2013 and 2018 (**Exhibit 6**).

**Exhibit 6: Percent Change in Community Population by Subregion, 2008-2013 and 2013-2018**

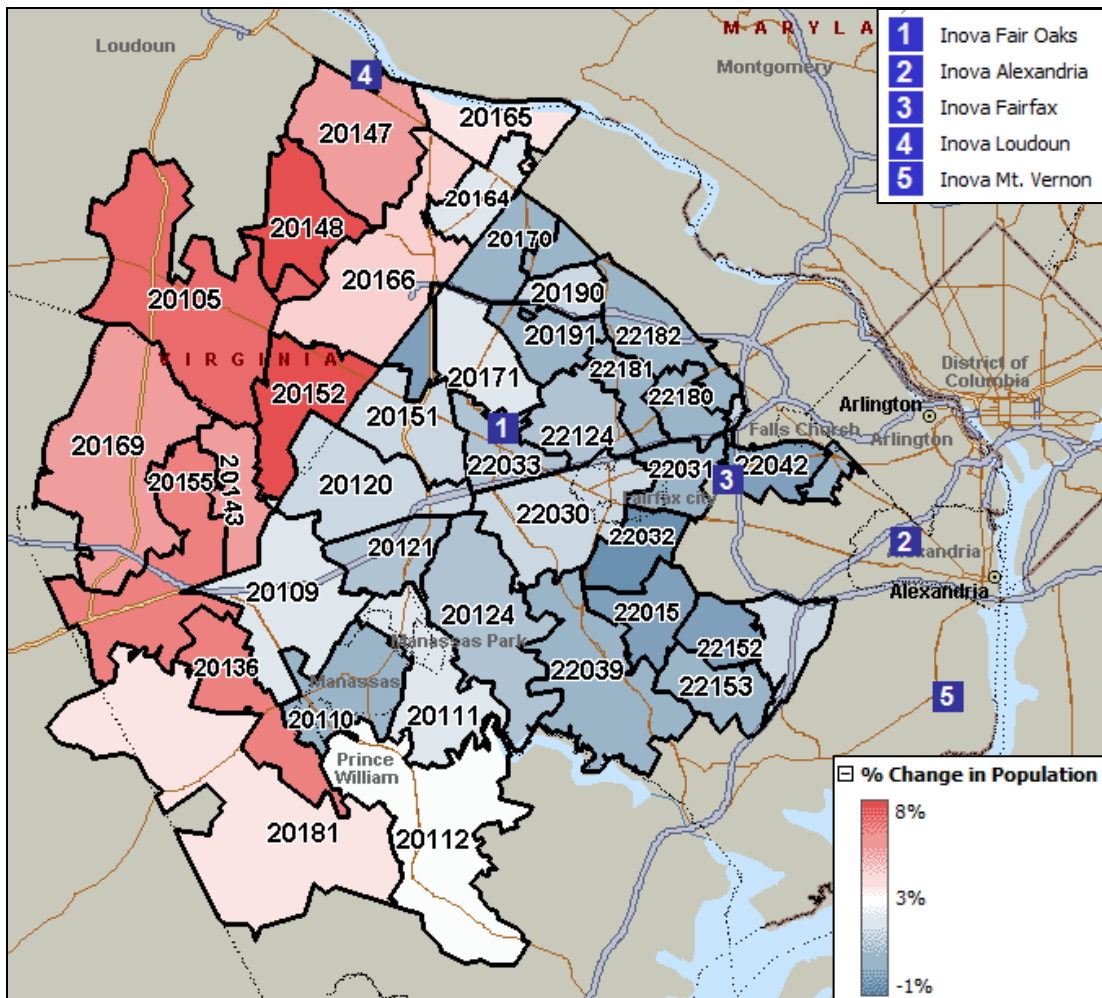

Subregion	Total Population			Percent Change in Population	
	2008	2013	2018	2008-2013	2013-2018

Source: The Metropolitan Washington Council of Governments, 2012.

The Northern Virginia area is growing at a faster rate than the Commonwealth of Virginia as a whole. The populations of the subregions of South Riding/Aldie and Ashburn/Arcola in Loudoun County are expecting the fastest growth (**Exhibit 6**).

**Exhibit 7** maps the anticipated population change by ZIP code from 2013 to 2018. The highest population growth is anticipated in Loudoun and Prince William counties.

**Exhibit 7: Population Change by ZIP Code, 2013-2018**

Sources: Microsoft MapPoint and the Metropolitan Washington Council of Governments, 2012.

*Loudoun and Prince William counties are anticipating the highest growth*

...

*Population in Loudoun County ZIP codes expected to increase 5.2% from 2013-2018*

**Exhibit 8** indicates that the 65+ age and 55 to 64 age cohorts are expected to increase faster than the population of the community as a whole.

**Exhibit 8: Percent Change in Population by Age, 2008-2013 and 2013-2018**

Growth and aging of the population, coupled with the impact of coverage expansions associated with health reforms, will increase demand for health services.

The proportion of the population 65 years of age and older varies by ZIP code. The subregions of Gainesville/Haymarket/Bull Run (ZIP code 20143), Reston/Herndon (ZIP code 20190) and Vienna (ZIP code 22180) had comparatively high proportions of this population (**Exhibit 9**).

**Exhibit 9: Percentage of Residents Aged 65+, 2008**

Sources: Microsoft MapPoint and the Metropolitan Washington Council of Governments, 2012.

*Growth and aging of the population, coupled with the impact of coverage expansions associated with health reforms, will increase demand for health services*

In 2008, about 68 percent of the community’s population was White. Non-White populations are expected to grow faster than White populations in the community.

The Asian and “Other” populations are expected to increase the most (**Exhibit 10**). The growing diversity of the community is important to recognize given that health disparities and the need to enhance the cultural competency of health care providers are present.

### Exhibit 10: Distribution of Population by Race, 2008-2013 and 2013-2018

Projections indicate that the Hispanic (or Latino) community population is expected to increase more rapidly than non-Hispanic (or Latino) ethnicities. In terms of overall percent change, the Inova Fair Oaks community is projected to experience growth in the Hispanic (or Latino) population of approximately 33 percent between 2008 and 2013 and six percent between 2013 and 2018 (**Exhibit 13**).

**Exhibit 13: Distribution of Population by Ethnicity, 2008-2013 and 2013-2018**

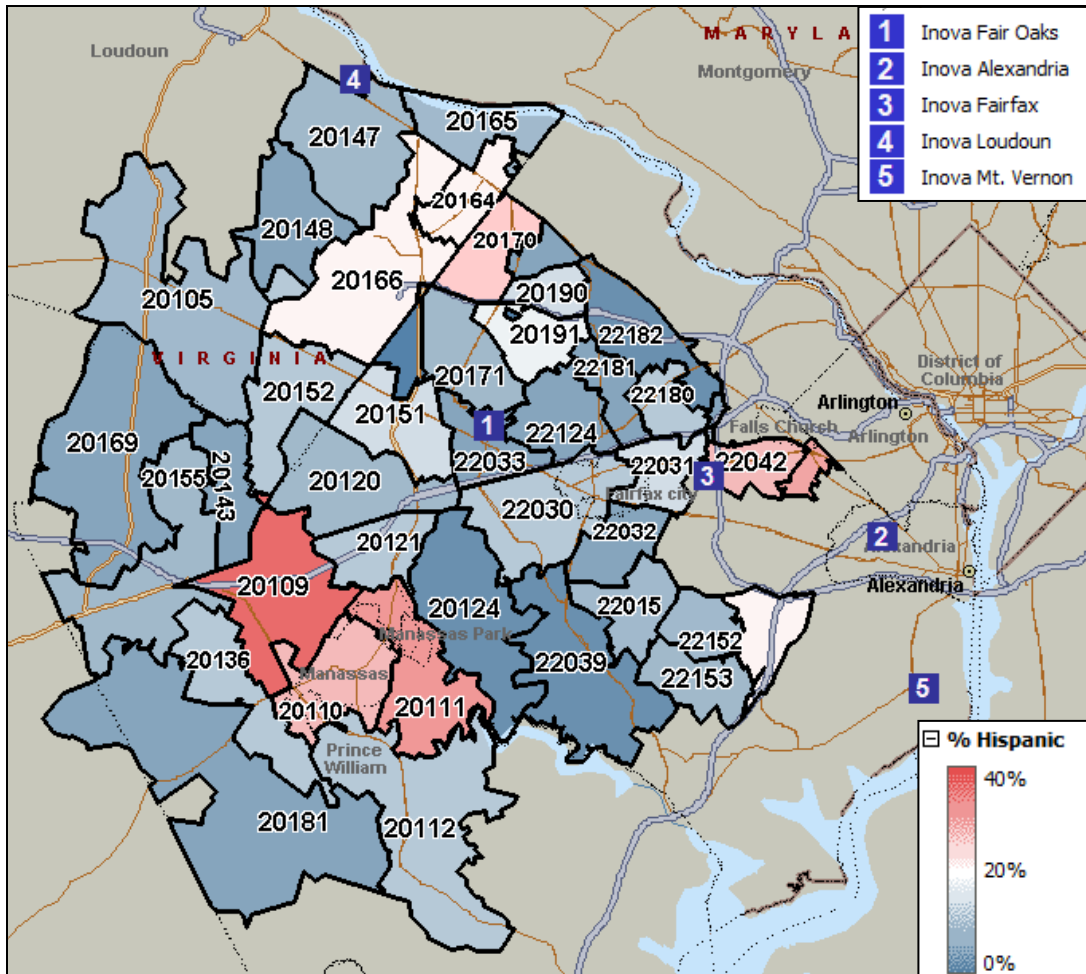

Ethnic Cohort	Community Population			Percent Change in Population

*The Hispanic (or Latino) population is growing rapidly*

...

*The highest proportions of Hispanic (or Latino) residents live in Manassas West (ZIP code 20109)*

Other demographic characteristics are presented in **Exhibit 15**.

## Exhibit 15: Prevalence of Demographic Indicators and Variation from the Commonwealth of Virginia, 2010

Demographic Indicators	Fairfax County	Loudoun County	Prince William County	Virginia	U.S.
Total Population With Any Disability	6.0%	4.5%	6.0%	<b>10.8%</b>	<b>11.9%</b>
Population 0-18 With Any Disability	2.2%	1.9%	2.0%	<b>3.4%</b>	<b>4.0%</b>
Population 18-64 With Any Disability	4.5%	3.7%	5.6%	<b>8.9%</b>	<b>10.0%</b>
Population 65+ With Any Disability	25.9%	26.6%	28.1%	<b>35.1%</b>	<b>36.7%</b>
Residents 25+ Who Did Not Graduate High School	8.4%	6.6%	12.4%	<b>13.5%</b>	<b>14.4%</b>
Residents 5+ Who Are Linguistically Isolated	15.0%	9.4%	13.5%	<b>5.7%</b>	<b>8.7%</b>
Housing Units With No Car	4.0%	2.9%	3.1%	<b>6.2%</b>	<b>9.1%</b>

Source: U.S. Census Bureau, 2012.

Characteristics are as follows:

- In 2010, the three jurisdictions had lower percentages of disabled residents than the Virginia and national averages.
- More community residents aged 25 and older have graduated from high school than the Virginia and national averages. Prince William County had the highest non-graduation rate at 12 percent.
- All three jurisdictions had a higher percentage of linguistically isolated individuals than the Virginia and national averages, with Fairfax County having the highest percentage at 15 percent. Linguistic isolation is defined as the population aged 5 and older who speak a language other than English at home and who speak English less than “very well.”

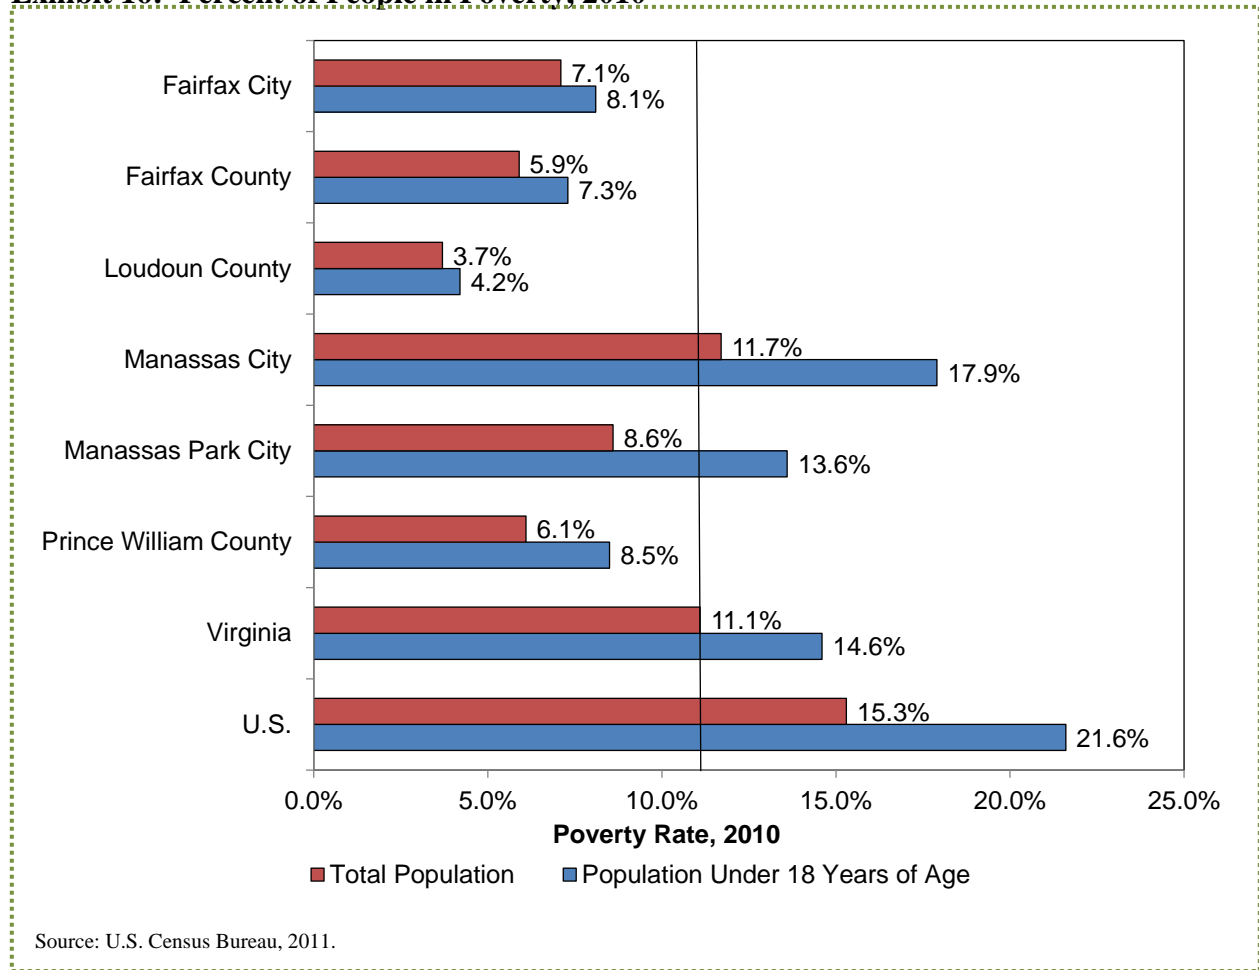

## Economic Indicators

The following types of economic indicators with implications for health were assessed: (1) people in poverty, (2) unemployment rates, (3) homelessness, (4) crime, (5) Commonwealth of Virginia and Local budget cuts, (6) utilization of government assistance programs, (7) household income, and (8) insurance status.

### 1. People in Poverty

Many health needs are associated with poverty. According to the U.S. Census, in 2010, about 15 percent of people in the U.S. and about 11 percent of people in Virginia lived in poverty. Manassas City reported a poverty rate in 2010 that was higher than the Virginia average (**Exhibit 16**). The pediatric population reports a higher poverty rate than the adult population.

**Exhibit 16: Percent of People in Poverty, 2010**

**Exhibit 17** presents poverty rates by race. The poverty rates for the Black and Hispanic (or Latino) populations of Fairfax and Loudoun counties and the Asian and Hispanic (or Latino) populations of Prince William County were higher than other groups.

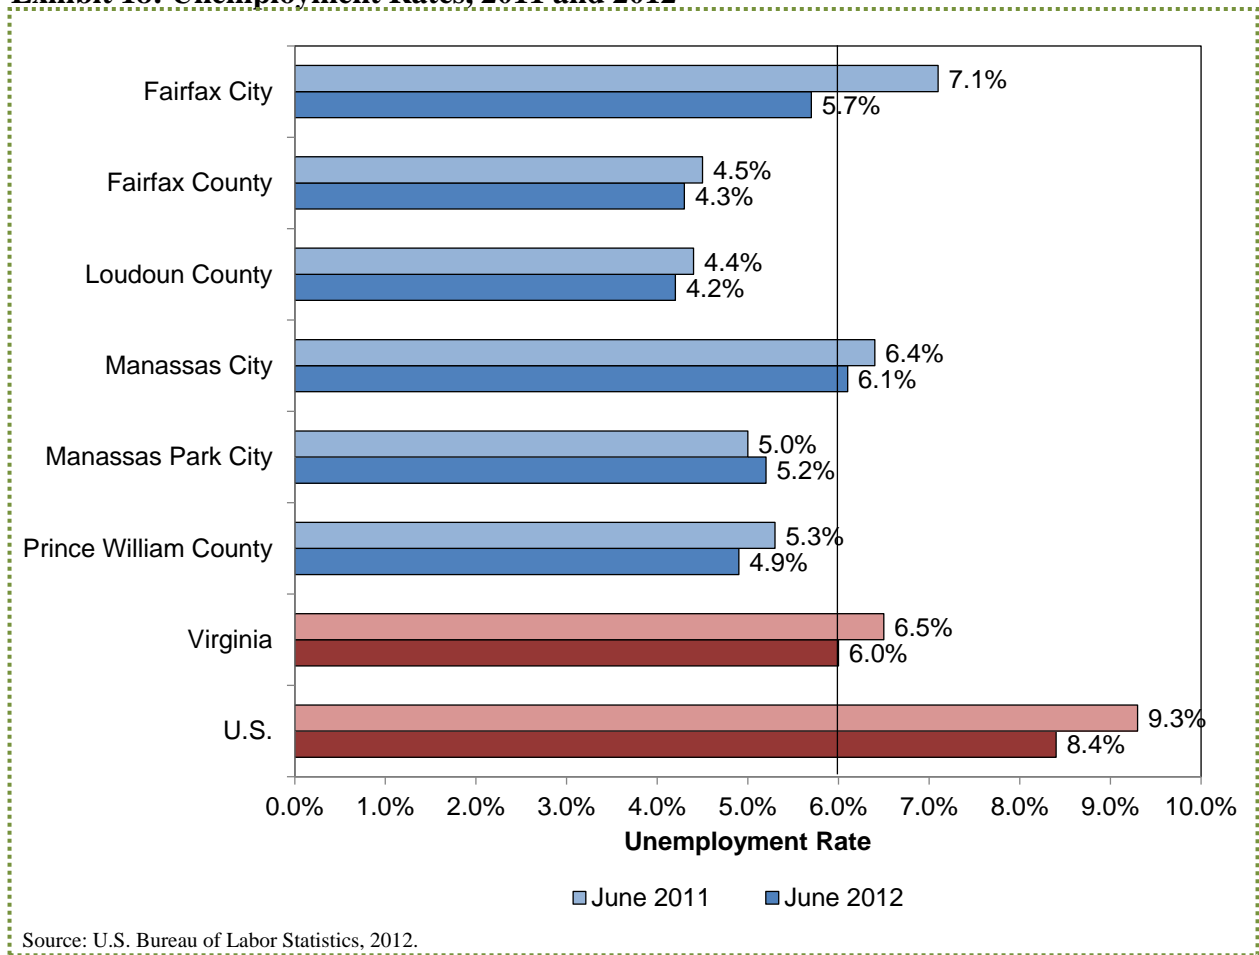

**Exhibit 17: Percent of People in Poverty by Race, 2010\***

## 2. Unemployment Rates

Manassas City reported a higher unemployment rate in 2012 than the Virginia average (**Exhibit 18**). High unemployment rates are associated with high numbers of uninsured people due to the lack of employer-based insurance.

**Exhibit 18: Unemployment Rates, 2011 and 2012**

The unemployment rate was highest for the Black populations in all areas for which data are available (**Exhibit 19**).

**Exhibit 19: Unemployment Rates by Race, 2010\***

### 3. Homelessness

Since 2001, the Metropolitan Washington Council of Governments has conducted an annual count of the homeless population in the metropolitan region. Of the three counties served by the hospital, Fairfax County reported the highest rates of homelessness between 2008 and 2011 (**Exhibit 20**). Rates of homelessness appear to have decreased between 2008 and 2011.

## Exhibit 20: Homelessness Rates by Jurisdiction, 2008-2011

Jurisdiction	Homelessness Rate				Percent Change in Rates 2008-2011
	2008	2009	2010	2011	
Fairfax County	17.4	16.1	14.3	13.6	-21.6%
Loudoun County	5.9	5.0	5.4	4.8	-18.2%
Prince William County	13.3	14.7	11.4	12.0	-10.4%
<b>Total</b>	<b>14.5</b>	<b>13.9</b>	<b>12.1</b>	<b>11.7</b>	<b>-19.3%</b>
<b>Northern Virginia</b>	<b>15.7</b>	<b>15.6</b>	<b>14.4</b>	<b>13.7</b>	<b>-12.6%</b>

Source: Homeless counts retrieved from the Metropolitan Washington Council of Governments' 2012 Homeless in Metropolitan Washington report.

Jurisdiction population estimates were retrieved from the U.S. Census Bureau: American Community Survey 5 Year Estimates 2006-2010, Annual Estimates of the Resident Population for Counties of Virginia April 1, 2000 to July 1, 2009, and County 2011 Population Datasets April 1, 2010 to July 1, 2011.

\*Rates are per 100,000 population.

## 4. Crime

The Federal Bureau of Investigation reports data on violent crime in the United States from county and city police departments that participate in its Uniform Crime Reporting (UCR) Program. Manassas City reported higher rates of total violent crime, robbery, and aggravated assault than the Virginia average in 2010, while Manassas City and Manassas Park City reported higher rates of forcible rape than Virginia and national averages (**Exhibit 21**).

## Exhibit 21: Violent Crime Rates, 2010

Jurisdiction	Population 2010	Violent Crime Rates per 100,000 Population				
		Total Violent Crime	Murder and Non- negligent Manslaughter	Forcible Rape	Robbery	Aggravated Assault
Fairfax City	22,058	136.0	0.0	13.6	45.3	77.1
Fairfax County	1,048,554	92.6	2.2	12.1	36.5	41.8
Loudoun County	291,653	64.8	0.0	9.9	12.0	42.9
Manassas City	36,067	379.8	2.8	41.6	152.5	183.0
Manassas Park City	13,195	136.4	0.0	53.1	45.5	37.9
Prince William	379,415	163.4	2.4	10.3	60.1	90.7
<b>Virginia</b>	<b>7,841,754</b>	<b>217.9</b>	<b>4.7</b>	<b>19.5</b>	<b>72.1</b>	<b>121.5</b>
<b>U.S.</b>	<b>303,965,272</b>	<b>410.0</b>	<b>4.9</b>	<b>27.9</b>	<b>121.0</b>	<b>256.2</b>

Sources: Violent crime counts were retrieved from the Federal Bureau of Investigation, Uniform Crime Reports, 2012. Population 2010 estimates were obtained from the U.S. Census Bureau, ACS 5 Year Estimates 2006-2010. Rates were calculated by Verité.

## 5. Commonwealth of Virginia and Local Budget Cuts

The recent recession has had major implications for employment and for the availability of state and county resources devoted to health, public health, and social services. The Commonwealth of Virginia has significantly reduced funding appropriated to these services.

The recent recession has had major implications not only for employment but also for the availability of state and county resources devoted to health, public health, and social services. The Commonwealth of Virginia and many Northern Virginia counties have significantly curtailed funding appropriated to these services.

Governor McDonnell's proposed the 2012-2014 biennial budget,<sup>5</sup> approved by the 2012 General Assembly. Funding changes include:

- **Children and Youth Services**

- Elimination of funding for child advocacy centers in the Office of Secretary of Health and Human Resources and Department of Social Services (\$846,000 for both FY 2013 and FY 2014, for a total reduction of \$1,692,000);
- Reductions in base funding to the Comprehensive Services Act for At-Risk Youth and Families (CSA) (\$17,678,003 for FY 2013 and \$14,987,327 for FY 2014, for a total reduction of \$32,665,330) and elimination of general fund support for wrap-around services in public schools (\$5,401,216 for both FY 2013 and FY 2014, for a total reduction of \$10,802,432 (offset by \$700,000));
- Elimination of funding for the Teen Pregnancy Prevention Initiative in Alexandria City<sup>6</sup> (the Initiative operated in the Richmond, Norfolk, Alexandria, Roanoke City, Crater, Portsmouth, and Eastern Shore health districts; funding reductions for the entire Initiative are \$455,00 for both FY 2013 and FY 2014, for a total reduction of \$910,000);

- **Aging and Elderly Services**

- Elimination of funding for certain non-state agencies that serve aging and elderly populations (\$386,722 for FY 2013 and \$767,945 for FY 2014, for a total reduction of \$1,154,667), including the Prince William County Care Coordination for the Elderly Virginians Program (approximately \$5,500 for FY 2013 and \$11,000 for FY 2014, for a total reduction of approximately \$16,500);
- Reductions in funding for in-home and community-based services, such as adult day care, homemaker, personal care, and transportation services, provided by Virginia's Area Agencies on Aging (\$131,853 for both FY 2013 and FY 2014, for a total reduction of \$263,706);

- **Health Services for Indigent and Low-income Populations**

- Reductions in funding for Alexandria Neighborhood Health Services, Inc. (\$37,830 for FY 2014);
- Reductions in funding for the Jeanie Schmidt Free Clinic of Virginia (\$19,125 for FY 2014);
- Reductions in funding for the Mission of Mercy program through the Virginia Dental Association Foundation (\$425 for FY 2013 and \$10,625 for FY 2014, for a total reduction of \$11,050);

---

<sup>5</sup>The 2012 Executive Budget Document. Retrieved on August 2, 2012 from <http://dph.virginia.gov/budget/buddoc12/index.cfm>.

<sup>6</sup>Alexandria City committed City general funds to maintain this program.

- Reductions in funding for the Virginia Association of Free Clinics (\$1,598,200 for FY 2014), the Virginia Community Healthcare Association (\$1,204,375 for FY 2014), and the Virginia Health Care Foundation (\$2,040,286 for FY 2014);
- Elimination of funding for the three remaining general medical clinics in Virginia, including the one in the Alexandria Health Department (\$233,500 in FY 2013 and \$466,963 in FY 2014, for a total reduction of \$700,463);
- Elimination of funding for commonwealth supported dental clinics (\$1,664,306 for both FY 2013 and FY 2014, for a total reduction of \$3,328,612);
- Reductions in income limits for the Medicaid long-term care eligibility group (\$36,435,516 for FY 2014);
- Reductions in funding to the commonwealth's Medicaid Children's Health Insurance Program due to slowed enrollment and lower managed care rates (\$8,254,417 in FY 2013 and \$52,782,923 in FY 2014, for a total reduction of \$61,037,340);
- Reductions in funding to the VCU and UVA academic health centers for indigent care services (\$14,995,994 for both FY 2013 and FY 2014, for a total reduction of \$29,991,988);
- **Health Departments, Facilities, and Workers**
  - Reductions in general fund appropriations to the Department of Health (\$1,771,250 FY 2013 and \$8,224,191 for FY 2014, for a total reduction of \$9,995,441);
  - Reductions in funding to the Department of Health Professions (\$97,067 for both FY 2013 and FY 2014, for a total reduction of \$194,134);
  - Withholding annual inflation adjustments from rates paid to nursing facilities (\$51,479,932 FY 2013 and \$79,055,622 for FY 2014, for a total reduction of \$130,535,554), home health agencies (\$154,126 for FY 2013 and \$330,992 for FY 2014, for a total reduction of \$485,118), outpatient rehabilitation agencies (\$413,744 FY 2013 and \$804,262 for FY 2014, for a total reduction of \$1,218,006), and hospitals (\$197,317,468 FY 2013 and \$323,309,280 for FY 2014, for a total reduction of \$520,626,748);
- **Other Health Programs and Services**
  - Reductions in the number of sign language interpreters provided for certain Twelve-Step Programs(\$16,900 for both FY 2013 and FY 2014, for a total reduction of \$33,800);
  - Balance the nongeneral fund appropriations for the Temporary Assistance for Needy Families (TANF) block grant for the Comprehensive Health Investment Project of Virginia (6,164,233 FY 2013 and \$5,107,564 for FY 2014, for a total reduction of \$11,271,797); and,
  - Elimination of one Virginia Epidemiology Response Team position (\$48,335 for both FY 2013 and FY 2014, for a total reduction of \$96,670).

In addition to the commonwealth's budget reductions, service area counties' proposed FY 2013 budgets include the following changes.

- **Fairfax County:**<sup>7</sup>
  - A decrease of about 4 percent since 2011 in the Fairfax County health department; and
  - A decrease of about 3 percent since 2011 in the total health and welfare department, including the Department of Family Services, Department of Administration for Human Services, the Health Department, the Office to Prevent and End Homelessness, and the Department of Neighborhood and Community Services.
- **Loudoun County:**<sup>8</sup>
  - A decrease in health services expenditures from \$4,244,348 to \$4,386,074 in FY 2012;
  - A proposed decrease in mental health, substance abuse, and developmental services from \$4,147,500 to \$3,721,440 funded through state aid; and
  - A proposed decrease in mental health, substance abuse, and developmental services from \$805,080 to \$437,520 funded through federal aid.
- **Prince William County:**<sup>9</sup>
  - A projected increase in expenditures of 4 percent in maternal and child health between 2012 and 2013;
  - A projected increase in emergency preparedness of 5 percent in emergency preparedness between 2012 and 2013;
  - A projected increase in environmental health of 5 percent in environmental health between 2012 and 2013;
  - An increase in the free clinic budget from \$70,800 to \$72,925; and
  - An increase in the total public health budget from \$287,245 to \$295,863.

Health and social services agencies across Northern Virginia have expressed many concerns about these funding reductions.

## 6. Utilization of Government Assistance Programs

Federal, state, and local governments provide assistance programs for low-income individuals and families. These programs include vouchers that subsidize housing costs, free and reduced priced lunches at public schools through the National School Lunch Program, the Supplemental Nutrition Assistance Program (SNAP), and Temporary Assistance for Needy Families (TANF).

Housing certificates and vouchers allow residents who meet certain eligibility criteria to receive monthly housing assistance under Section 8 of the Housing Act of 1937. Under that program, subsidies of rental and mortgage costs help make housing more affordable. Residents who apply for these certificates and vouchers may be placed on a waiting list before funds become available. Fairfax County, Loudoun County, Manassas Park City, and Prince William County all reported average months on the waiting list for Section 8 housing certificates and vouchers that were equal to or greater than the Virginia average. Average household and federal contributions for these areas are noticeably higher than the U.S. and Virginia averages (**Exhibit 22**).

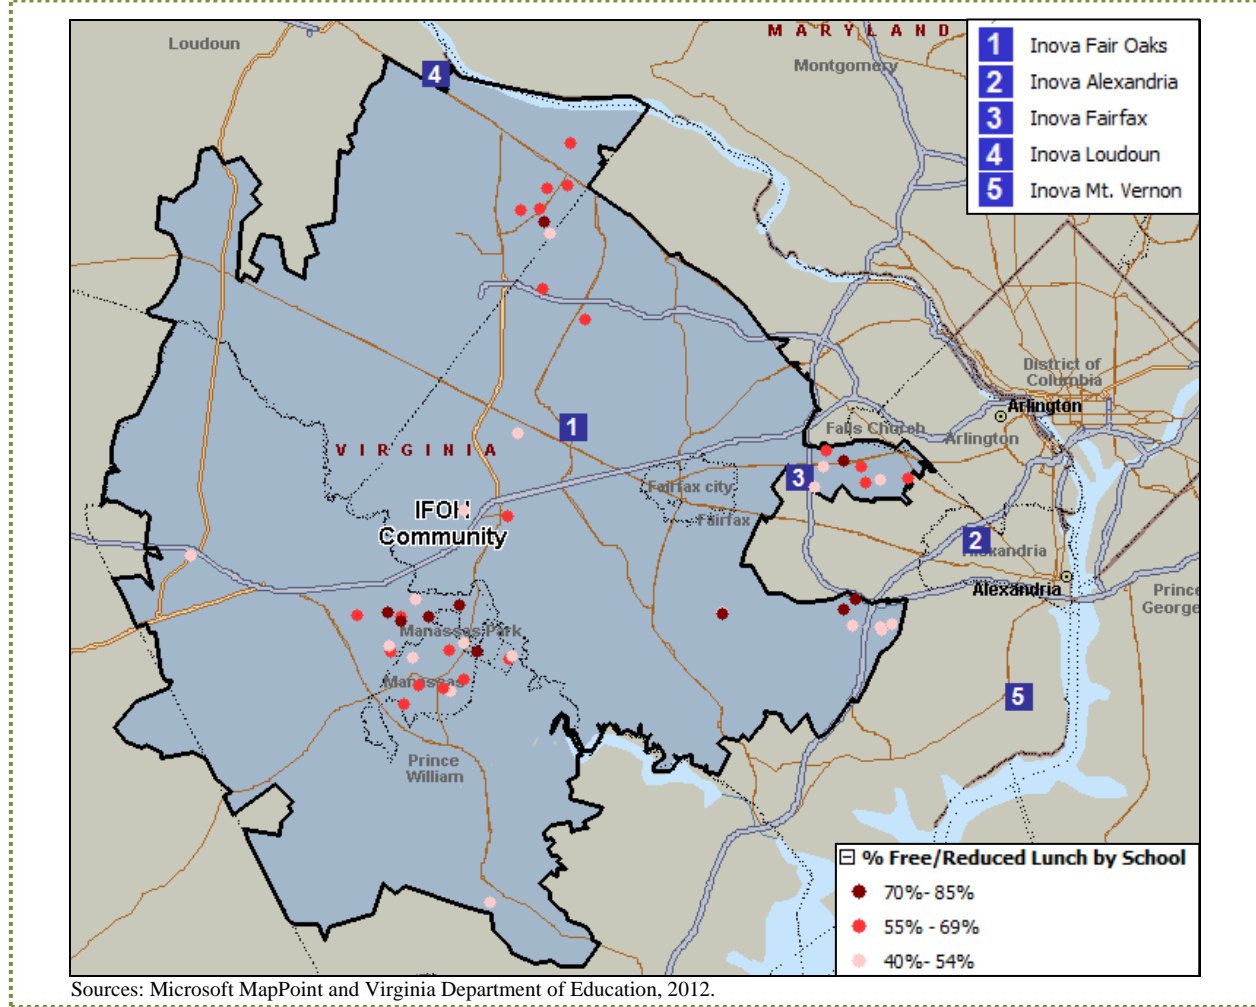

**Exhibit 22: Waiting Time for Section 8 Housing Certificates and Vouchers by Jurisdiction, 2009**

Jurisdiction	Number of Participating Households	Spending per Unit per Month		Average Months on Waiting List
		Average Household Contribution	Average Federal Contribution	
Fairfax County	3,136	\$462	\$1,068	10
Fairfax City	36	\$360	\$1,030	0
Loudoun County	706	\$464	\$953	20
Manassas City	238	\$356	\$984	8
Manassas Park City	78	\$385	\$1,076	17
Prince William County	1,844	\$462	\$1,031	13
<b>Virginia</b>	<b>42,727</b>	<b>\$359</b>	<b>\$676</b>	<b>10</b>
<b>U.S.</b>	<b>2,071,161</b>	<b>\$335</b>	<b>\$657</b>	<b>14</b>

Source: U.S. Department of Housing and Urban Development, 2012.

Schools participating in the National School Lunch Program are eligible to receive financial assistance from the USDA to provide free or reduced-cost meals to low-income students. Schools with 40 percent or more of their student body receiving free or reduced-cost meals are eligible for school-wide Title I funding, designed to ensure that students meet grade-level proficiency standards. In the Inova Fair Oaks community, 53 out of 220 schools had greater than 40 percent of the student body eligible for free or reduced-cost lunches (**Exhibit 23**). These schools are located near Sterling/Dulles, Manassas and Manassas Park cities, and East Fairfax 29/50 Corridor.

**Exhibit 23: Public Schools with Over 40 Percent of Students Eligible for Free or Reduced Price Lunches, School Year 2011-2012**

**Exhibit 24** shows the percent of the total population enrolled in the Supplemental Nutrition Assistance Program (SNAP). This U.S. Department of Agriculture program provides financial support for low-income and no-income residents to purchase food. Ten percent of residents in Manassas City were enrolled in SNAP in 2010.

**Exhibit 24: Supplemental Nutrition Assistance Program (SNAP) Enrollment, 2010**

Jurisdiction	Average SNAP Enrollment	Total Population	Percent of Total Population
Fairfax County	36,958.8	1,082,077	3.4%
Loudoun County	7,428.0	291,653	2.5%
Manassas City	3,648.1	36,067	10.1%
Manassas Park City	1,164.3	13,195	8.8%
Prince William County	23,915.4	379,415	6.3%
<b>Virginia</b>	<b>806,895.3</b>	<b>7,841,754</b>	<b>10.3%</b>

## 7. Household Income

In the Inova Fair Oaks community and in 2008, approximately five percent of all households had incomes below \$25,000, an approximation of the federal poverty level (FPL) for a family of four; 17 percent had incomes less than \$50,000, an approximation of 200 percent of the FPL for a family of four (**Exhibit 26**). FPL is used by many agencies and organizations to assess household needs for low-income assistance programs.

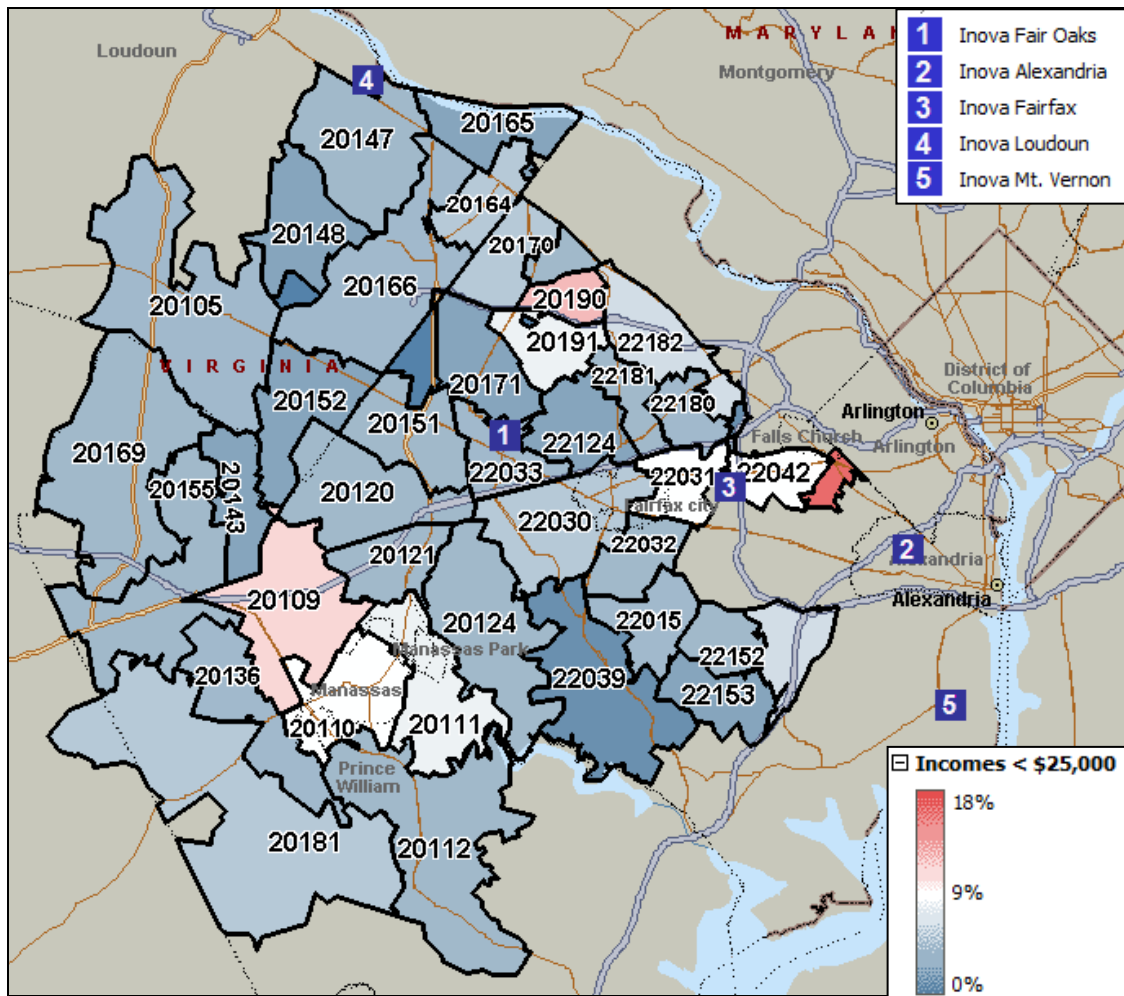

**Exhibit 26: Percent Low-Income Households by Subregion, 2008**

...

*The greatest proportions of private discharges originated from Ashburn/Arcola (ZIP codes 20148) and South Riding/Aldie (ZIP Codes 20152 and 20105)*

## County/City-Level Health Status and Access Indicators

The following secondary data sources have been used to examine county-level and city-level health status and access indicators in the Inova Fair Oaks community: (1) County Health Rankings, (2) Community Health Status Indicators Project, (3) Virginia Department of Health, and (4) the Behavioral Risk Factor Surveillance System.

### 1. County Health Rankings

*County Health Rankings*, a collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute, ranks each county within each state or commonwealth in terms of health factors and health outcomes. The health outcomes measure is a composite based on mortality and morbidity statistics, and the health factors measure is a composite of several variables known to affect health outcomes: health behaviors, clinical care, social and economic factors, and physical environment.

*County Health Rankings* is updated annually. *County Health Rankings 2012* relies on data from 2002 to 2010, with most data originating in 2006 to 2009. *County Health Rankings 2011* relies on data from 2001 to 2009, with most data originating in 2006 to 2008. In 2011, *County Health Rankings* was able to rank 132 of Virginia's 134 counties. In 2012, *County Health Rankings* ranked 131 counties.

**Exhibit 33** provides a summary analysis of the rankings for counties and cities in Inova Fair Oaks' community. Rankings for Virginia were divided into quartiles to indicate how each county ranks versus others in the commonwealth. **Exhibit 33** illustrates the quartile into which each area fell by indicator in the 2012 edition, and also illustrates whether a county's ranking worsened or improved from 2011. For example, for the 2012 edition, Fairfax County was in the top half (3<sup>rd</sup> out of 131) of Virginia counties and independent cities for the overall rate of mortality; however, its ranking in 2012 fell for this indicator compared to the 2011 assessment.

**Exhibit 33A: County-Level Health Status and Access Indicators**

Indicator	Fairfax City	Rank Change 2011 to 2012	Fairfax County	Rank Change 2011 to 2012	Loudoun County	Rank Change 2011 to 2012

Key	
2012 County Ranking 1 - 66	
2012 County Ranking 67 - 98	
2012 County Ranking 99 -131	
Ranks Not Comparable Between 2011 and 2012	N/A
Rank Decreased from 2011 to 2012	↓

For the Inova Fair Oaks community, three jurisdictions ranked in the bottom one-half (67<sup>th</sup> or higher out of 131) of Virginia jurisdictions for Alcohol Use,<sup>10</sup> Sexual Activity,<sup>11</sup> Quality of Care,<sup>12</sup> and Community Safety.<sup>13</sup> All areas ranked in the bottom quartile for Environmental Quality.<sup>14</sup>

Manassas Park City had the highest number of unfavorable indicators, ranking in the bottom one-half of Virginia jurisdictions on the following: Diet and Exercise,<sup>15</sup> Sexual Activity, Access to Care,<sup>16</sup> Quality of Care, Education,<sup>17</sup> Community Safety, Environmental Quality, and Built Environment.<sup>18</sup>

## 2. Community Health Status Indicators Project

The *Community Health Status Indicators* (CHSI) Project, provided by the U.S. Department of Health and Human Services, compares many health status and access indicators to both the median rates in the U.S. and to rates in “peer counties” or cities across the U.S.

Counties or cities are considered “peers” if they share common characteristics such as population size, poverty rate, average age, and population density. **Exhibit 34** highlights the analysis of CHSI health status indicators. Cells in the table are shaded if, on that indicator, a city or county compared unfavorably both to the U.S. as a whole and to the group of specified peer communities.

---

<sup>10</sup> A composite measure that examines the percent of adults who report heavy or binge drinking and the motor vehicle crash death rate per 100,000 population.

<sup>11</sup> A composite measure that examines the chlamydia rate per 100,000 population and the teen birth rate per 1,000 females ages 15 to 19.

<sup>12</sup> A composite measure that examines the hospitalization rate for ambulatory care sensitive conditions, whether diabetic Medicare patients are receiving HbA1C screening, and percent of chronically ill Medicare enrollees in hospice care in the last 8 months of life.

<sup>13</sup> A measure that examines the violent crime rate.

<sup>14</sup> A composite measure that examines the number of air pollution-particulate matter days and air pollution-ozone days.

<sup>15</sup> A composite measure that examines adult obesity and physical inactivity.

<sup>16</sup> A composite measure that examines the percent of the population without health insurance and ratio of population to primary care physicians.

<sup>17</sup> A composite measure that examines high school graduation rates and the percent of adults with some post-secondary education.

<sup>18</sup> A composite measure that examines access to healthy foods and recreational facilities and the percent of restaurants that are for fast food.

**Exhibit 34: CHSI Indicators**

	Unfavorable

Source: The *Community Health Status Indicators* Project, 2010.

\* The Community Health Status Indicators Project considers a high number of births to women age 40-54 to be an unfavorable health outcome. Caution should be used when interpreting this indicator; women may be choosing to delay having children to pursue career or educational goals.

Overall, Fairfax and Prince William counties compared relatively favorably to U.S. and peer county benchmarks. Fairfax City compared unfavorably on the highest number of indicators, six.

No care in the first trimester, births to women age 40-54, and breast cancer (female) compared unfavorably in three of the six areas.

### 3. Virginia Department of Health

The Virginia Department of Health (VDH) maintains a publicly-available data warehouse that includes indicators regarding a number of health issues. **Exhibit 35** compares each area's age-adjusted rates for leading causes of death to Virginia averages. **Exhibits 36 through 39** assess non age-adjusted rates for racial and ethnic disparities associated with cancer, cardiovascular disease, injury, and other causes of death. **Exhibits 40 through 43** provide information on cancer incidence rates, sexually transmitted infection diagnosis rates, the number of residents living with HIV, and reported cases of tuberculosis. **Exhibits 44 and 45** provide information on maternal and child health indicators by race.

**Exhibit 35: Leading Causes of Death, 2010**

Rates are per 100,000 population and are not age-adjusted.

\* The "Other" population includes residents who identify as American Indian/Native American, Asian/Pacific Islander, two or more races, or some other race.

In the community, the non-White population compared unfavorably to Virginia averages for various cancer mortality rates. The White population in Fairfax County had higher rates of prostate cancer than the Virginia average.

Within the community, Fairfax County had the highest mortality rates for pancreatic, breast, cervical and uterine, and prostate cancers, and for non-Hodgkin's lymphoma and leukemia. Black residents had higher mortality rates of breast cancer in Fairfax County, all cancers in Loudoun County, and cervical and uterine cancer and non-Hodgkin's lymphoma in Prince William County.

Rates are per 100,000 population and are not age-adjusted.

\* The “Other” population includes residents who identify as American Indian/Native American, Asian/Pacific Islander, two or more races, or some other race.

The “Other” (non-White, non-Black) population compared unfavorably to Virginia for mortality associated with hypertensive heart and renal diseases and “all other diseases of the heart” in Fairfax County and ischemic heart diseases in Prince William County.

Within the community, Fairfax County had the highest mortality rate of cardiovascular disease with the exception of ischemic heart disease. Black residents had higher mortality rates for hypertensive heart and renal diseases in Fairfax and Prince William counties and all but one cardiovascular disease type in Loudoun County (**Exhibit 37**).

#### Key

Higher than VA Average	
------------------------	--

Source: Virginia Department of Health, 2012.

\* The "Other" population includes residents who identify as American Indian/Native American, Asian/Pacific Islander, two or more races, or some other race.

\*\*Rates may be distorted in Fairfax City, Manassas City, and Manassas Park City due to small sample sizes.

Black residents throughout the community and throughout the commonwealth have experienced significant maternal and child health disparities (**Exhibit 45**).

#### **4. Behavioral Risk Factor Surveillance System**

Data collected by the Centers for Disease Control and Prevention's (CDC) Behavioral Risk Factor Surveillance System (BRFSS) are based on a telephonic survey that gathers data on various health indicators, risk behaviors, healthcare access, and preventive health measures. Data are collected for the entire U.S. Analysis of BRFSS data can identify localized health issues and trends, and enable county, state (or commonwealth), or nation-wide comparisons. **Exhibit 46** compares various BRFSS indicators for the community served by Inova Fair Oaks, Virginia, and the U.S. Indicators are shaded if an area's values compare unfavorably to Virginia averages.

**Exhibit 46A: BRFSS Indicators and Variation from the Commonwealth of Virginia, 2010**

\*\*Adult males having five or more drinks on one occasion; adult females having four or more drinks on one occasion

\*\*\*Adult men having more than two drinks per day; adult women having more than one drink per day.

In three areas, the percent of people in 2010 who were heavy drinkers and the percent who report being overweight or obese compared unfavorably. Fairfax and Manassas cities had the greatest number of indicators (five) that compared unfavorably to the Commonwealth of Virginia, followed by Prince William County (four). Loudoun County had the least unfavorable indicators.

Within the service area, three indicators were reported as greater than 75 percent worse than the Commonwealth of Virginia:

- The percent of people who were heavy drinkers in Fairfax County;
- The percent of people who have ever been told by a doctor that they have asthma in Fairfax City; and
- The percent of people reporting having all teeth extracted in Manassas City.

Overall, Virginia compared unfavorably to the U.S. on the percent of people who were current smokers, the percent of people who had done no physical activity in the past 30 days, and the percent of people who have ever been told by a doctor that they have diabetes.

## Ambulatory Care Sensitive Conditions

This section examines the frequency of discharges for ACS conditions throughout the community and at the hospital.

The methodologies for quantifying discharges for ACSC have been well-tested for more than a decade. The methodologies quantify inpatient admissions for diabetes, perforated appendixes, chronic obstructive pulmonary disease (COPD), hypertension, congestive heart failure, dehydration, bacterial pneumonia, urinary tract infection, asthma, and other conditions that, in theory, could have been prevented if adequate ambulatory (primary) care resources were available and accessed by those patients.<sup>19</sup>

Disproportionately large numbers of discharges for ACSC indicate potential problems with the availability or accessibility of ambulatory care services. The Agency for Healthcare Research and Quality (AHRQ), part of the U.S. Department of Health and Human Services, publishes software and methodologies for assessing discharges for ACSC. The AHRQ software was applied to analyze the prevalence of discharges for ACSC in geographic areas served by Inova Fair Oaks.

The ACSC analysis provides a single indicator of potential health problems - allowing comparisons to be made reliably across geographic areas and hospital facilities. This analysis also allows demonstrating a possible “return on investment” from interventions that reduce admissions (for example, for uninsured or Medicaid patients) through better access to ambulatory care resources.

---

<sup>19</sup> See: <http://www.ahrq.gov/data/hcup/factbk5> for more information on this methodology.

## 1. County/City-Level Analysis

Disproportionately large numbers of discharges for ACSC indicate potential problems with the availability or accessibility of ambulatory (primary) care services. **Exhibit 47** indicates for the Inova Fair Oaks community how many hospital discharges were found to be for ACSC by payer and by area.

**Exhibit 47: Inova Fair Oaks Community-Wide Discharges for ACSC by Payer, 2010**

Jurisdiction	Medicaid	Medicare	Other	Private	Self-pay	Unknown /Missing	Total
Fairfax County	6.1%	16.9%	3.5%	5.8%	11.4%	11.8%	9.8%
Loudoun County	8.7%	18.9%	4.5%	5.5%	15.3%	11.1%	9.7%
Manassas City	7.3%	18.8%	3.5%	7.1%	12.3%	9.2%	10.7%
Prince William County	8.6%	20.9%	5.3%	6.9%	14.2%	12.5%	11.3%
<b>Total</b>	<b>7.2%</b>	<b>18.0%</b>	<b>4.3%</b>	<b>6.1%</b>	<b>12.7%</b>	<b>11.6%</b>	<b>10.2%</b>

Source: Verité analysis of discharge data from the Health Systems Agency of Northern Virginia using AHRQ software, 2011.

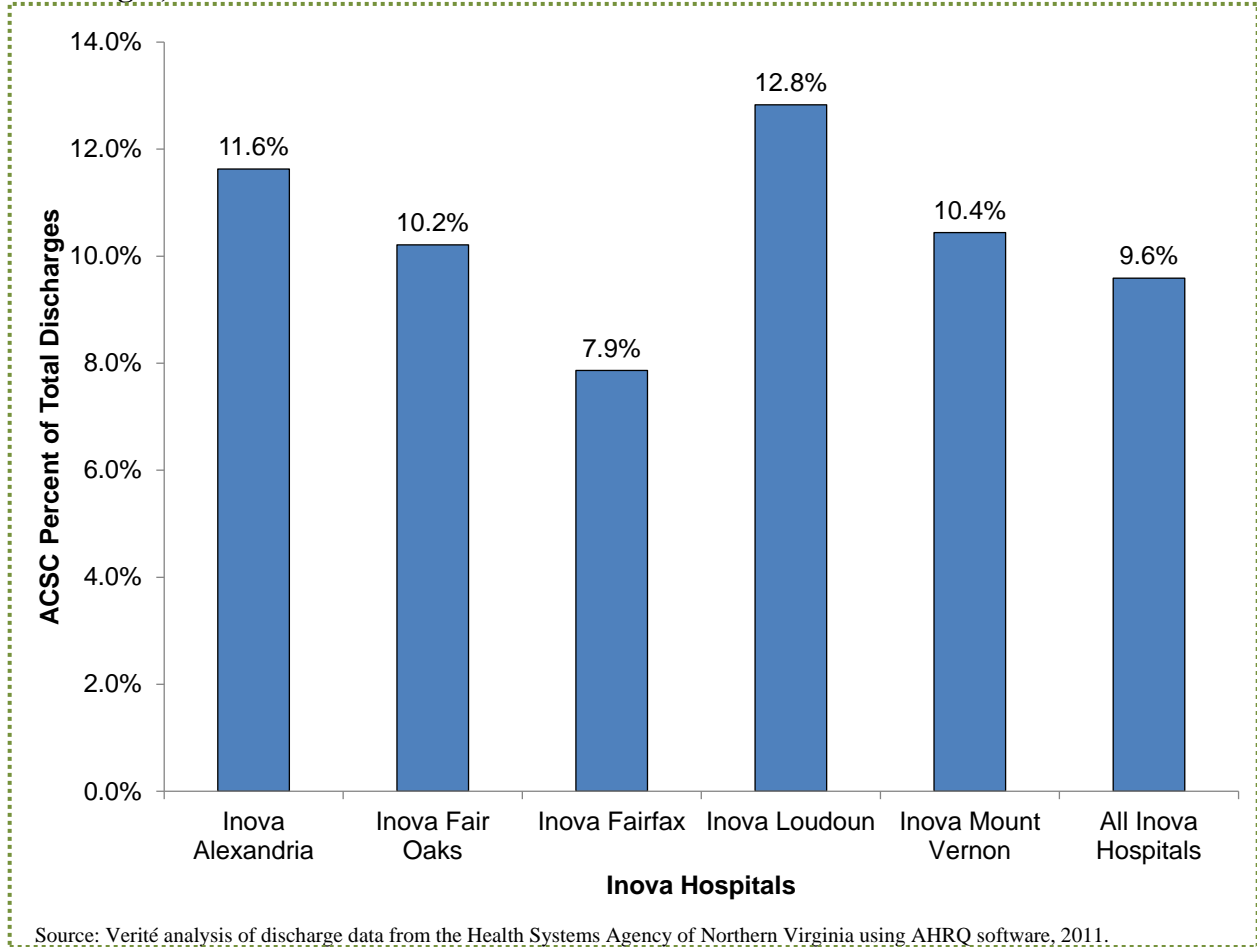

The table indicates that in 2010, 10.2 percent of discharges were for ACSCs. Medicare beneficiaries had the highest proportion of discharges for ACSC, followed by self-pay (uninsured) people.

## 2. ZIP Code-Level Analysis

**Exhibit 48** illustrates the rate of discharges for ACSC by ZIP code. These discharges were most prevalent in Vienna (ZIP code 22027), Gainesville/Haymarket/Bull Run (ZIP code 20181), Manassas East (ZIP code 20111), and Reston/Herndon (ZIP code 20190).

**Exhibit 49: Inova Fair Oaks Hospital Discharges for ACSC as a Percent of Total Discharges, 2010**

**Exhibit 50** indicates that Inova Fair Oaks’ discharges for ACSC were most concentrated in three conditions: urinary tract infection, bacterial pneumonia, and congestive heart failure.

### Exhibit 50: Discharges for ACSC by Condition and Inova Facility, 2010

Condition	Inova Alexandria	Inova Fair Oaks	Inova Fairfax	Inova Loudoun	Inova Mt. Vernon	Total

*53% of Inova Fair Oaks' discharges for ACSC were for persons 65 years of age and older*

Of Inova Fair Oaks' emergency department visits in fiscal year 2010, 9.2 percent also could be classified as being for ACSC. Across all Inova hospitals, 9.1 percent of emergency department visits could be classified as being for ACSC in 2010. **Exhibit 53** indicates that Inova Fair Oaks' emergency department visits for ACSC were more concentrated in four conditions: urinary tract infection, chronic obstructive pulmonary disease, bacterial pneumonia, and adult asthma.

### Exhibit 53: Emergency Department Discharge Visits for ACSC by Condition and Inova Facility, 2010

### Dignity Health’s Community Needs Index

Dignity Health, a hospital system based in California, developed the *Community Needs Index*, a standardized index that measures barriers to healthcare access by county and ZIP code. The index is based on five social and economic indicators:

- The percentage of elderly, children, and single parents living in poverty;
- The percentage of adults over the age of 25 with limited English proficiency, and the percentage of the population that is non-White;
- The percentage of the population without high school diplomas;
- The percentage of uninsured and unemployed residents, and;
- The percentage of the population renting houses.

The *Community Needs Index* represents a score based on these indicators, assigned to each ZIP code. Scores range from “Lowest Need” (1.0-1.7), to “Highest Need” (4.2-5.0). **Exhibit 54** presents the *Community Needs Index* (CNI) score of each ZIP code in the Inova Fair Oaks community. East Fairfax 29/50 Corridor (ZIP code 22044) exhibits the highest need with a score of 4.4.

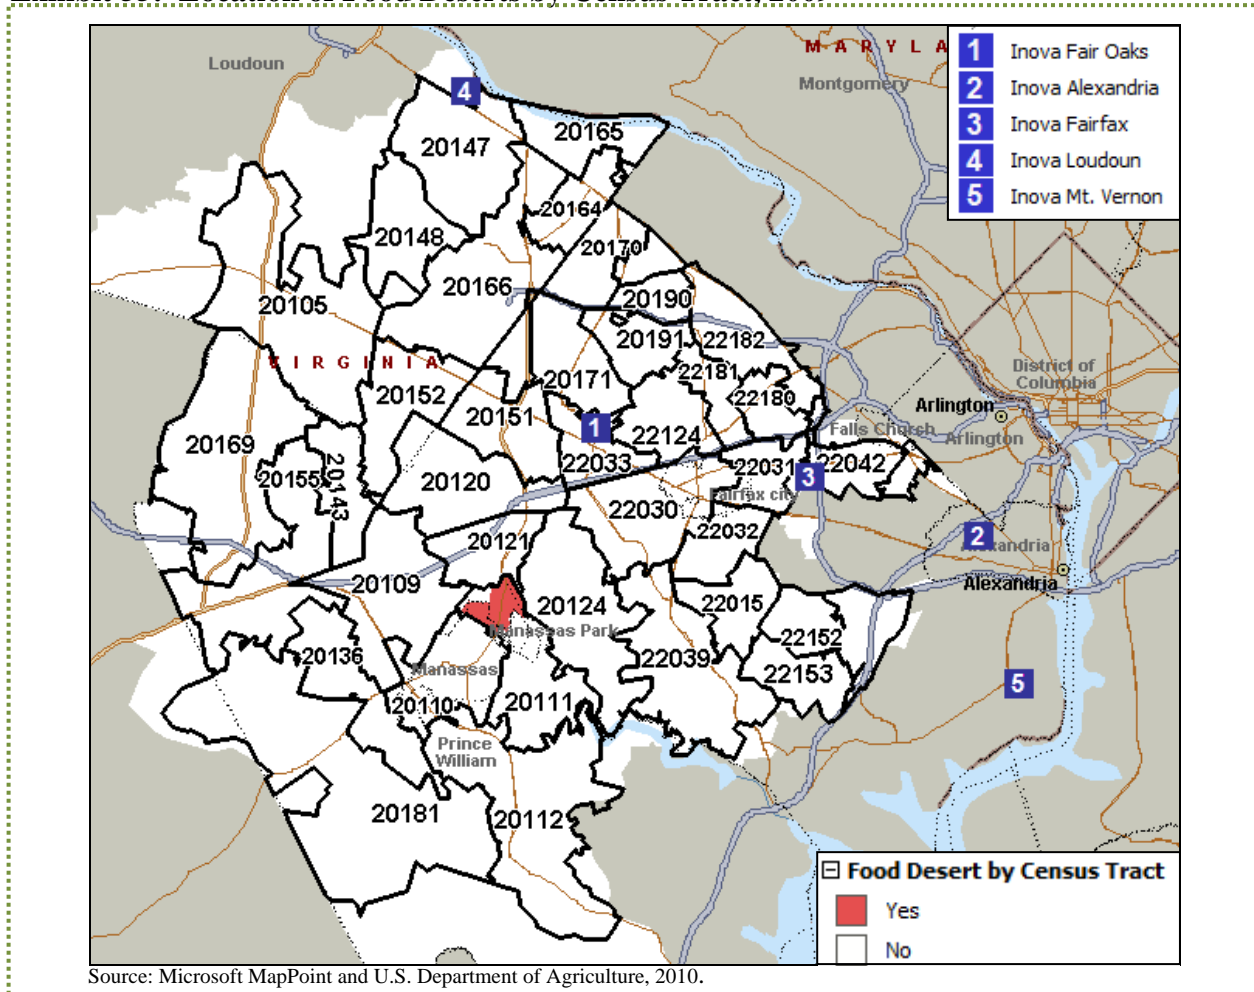

## Food Deserts

The U.S. Department of Agriculture’s Economic Research Service estimates the number of people in each census tract that live “more than 1 mile from a supermarket or large grocery store in urban areas and more than 10 miles from a supermarket or large grocery store in rural areas.”<sup>20</sup> Several government-led initiatives aim to increase the availability of nutritious and affordable foods to people living in these “food deserts.” **Exhibit 55** indicates the location of identified food deserts in the Inova Fair Oaks community.

Two census tracts in the community were determined to be one food desert. The food desert is located in Manassas East (ZIP code 20111).

**Exhibit 55: Location of Food Deserts by Census Tract, 2009**

<sup>20</sup> U.S. Department of Agriculture. . Retrieved 2011, from <http://www.ers.usda.gov/Data/FoodDesert/>

## Chronic Disease

According to the CDC, chronic diseases are “noncommunicable illnesses that are prolonged in duration, do not resolve spontaneously, and are rarely cured completely.” The CDC also indicates that chronic diseases are “the most common and costly of all health problems” and are “also the most preventable.” Certain behaviors, especially “tobacco use, insufficient physical activity, poor eating habits, and excessive alcohol use” contribute to the occurrences of chronic diseases.<sup>21</sup>

Chronic diseases are both common in prevalence and costly to treat. The CDC indicates that nearly fifty percent of adult Americans “live with at least one chronic illness” and that these illnesses are responsible for 75 percent of health care costs.

Because of the health impacts of chronic disease, PPACA includes provisions that aim to prevent, manage, or reduce chronic disease. IRS Notice 2011-52 (anticipatory regulations regarding the CHNA process) further emphasizes its importance by encouraging hospital facilities to interview persons who can serve as a leader or representative of those with chronic diseases.

Assessment findings regarding chronic disease include the following:

- **Chronic Disease Incidence Rates**
  - The incidence rates of breast and ovarian cancers and melanomas in Fairfax County and cervical and ovarian cancers in Prince William County were higher than Virginia rates according to the Virginia Department of Health.
  - The following chronic diseases compared unfavorably to Virginia averages according to the Behavioral Risk Factor Surveillance System:
    - Asthma in Fairfax City and Prince William County;
    - Diabetes in Manassas City; and
    - Coronary heart disease or angina in Fairfax County.
- **Chronic Disease Mortality Rates**
  - The following mortality rates compared unfavorably to national and peer county averages according to the Community Health Status Indicators Project:
    - Breast cancer in Fairfax and Manassas cities and Loudoun County;
    - Colon cancer in Fairfax and Manassas Park cities;
    - Lung cancer in Fairfax and Manassas Park cities; and
    - Strokes in Manassas and Manassas Park cities.

---

<sup>21</sup> See <http://www.cdc.gov/chronicdisease/resources/publications/AAG/chronic.htm>.

- The following mortality rates compared unfavorably to Virginia averages according to the Virginia Department of Health:
  - Cancer, cerebrovascular diseases, and primary hypertension and renal diseases in Fairfax City;
  - Chronic lower respiratory disease in Manassas City; and
  - Diabetes in Fairfax and Manassas Park cities.
- Health disparities exist among racial cohorts for various cancers, cardiovascular diseases, cerebrovascular diseases, and diabetes mellitus mortality rates according to the Virginia Department of Health.
- Racial cohorts compared unfavorably to Virginia averages for the following mortality rates according to the Virginia Department of Health:
  - Various cancers in the non-White population of Fairfax, Loudoun, and Prince William counties;
  - Chronic liver disease and cirrhosis in the Black population of Loudoun County;
  - Prostate cancer in the White population of Fairfax County; and
  - The Other<sup>22</sup> population: hypertensive heart and renal diseases and “all other diseases of the heart” in Fairfax County, ischemic heart diseases in Prince William County, chronic liver disease and cirrhosis in Loudoun and Prince William counties, diabetes mellitus in Fairfax and Loudoun counties, and cerebrovascular diseases in Fairfax County.
- Discharges for ACSC Associated with Chronic Disease
  - Congestive heart failure, chronic obstructive pulmonary disease, adult asthma, and diabetes long-term complications all accounted for at least five percent of Inova Fair Oaks’ discharges for ACSC.

Analysis of diagnosis codes in inpatient discharge data from the Inova Health System indicate that 46 percent of Inova Fair Oaks’ discharges were for conditions identified by CMS as associated with chronic disease. Discharges for chronic disease were concentrated in rheumatoid arthritis/osteoarthritis, chronic kidney disease, anemia, diabetes, heart failure, acquired hypothyroidism, hypertension, asthma, hyperlipidemia, chronic obstructive pulmonary disease and bronchiectasis, and atrial fibrillation (**Exhibit 56**).

---

<sup>22</sup> The “Other” population includes residents who do not identify as White or Black.

## Exhibit 56: Percent of Chronic Condition Discharges from Inova Fair Oaks, 2010

## Medically Underserved Areas and Populations

HRSA has calculated an Index of Medical Underservice (IMU) score for communities across the U.S. The IMU score calculation includes the ratio of primary medical care physicians per 1,000 persons, the infant mortality rate, the percentage of the population with incomes below the poverty level, and the percentage of the population greater than age 64. IMU scores range from zero to 100 where 100 represents the least underserved and zero represents the most underserved.<sup>23</sup>

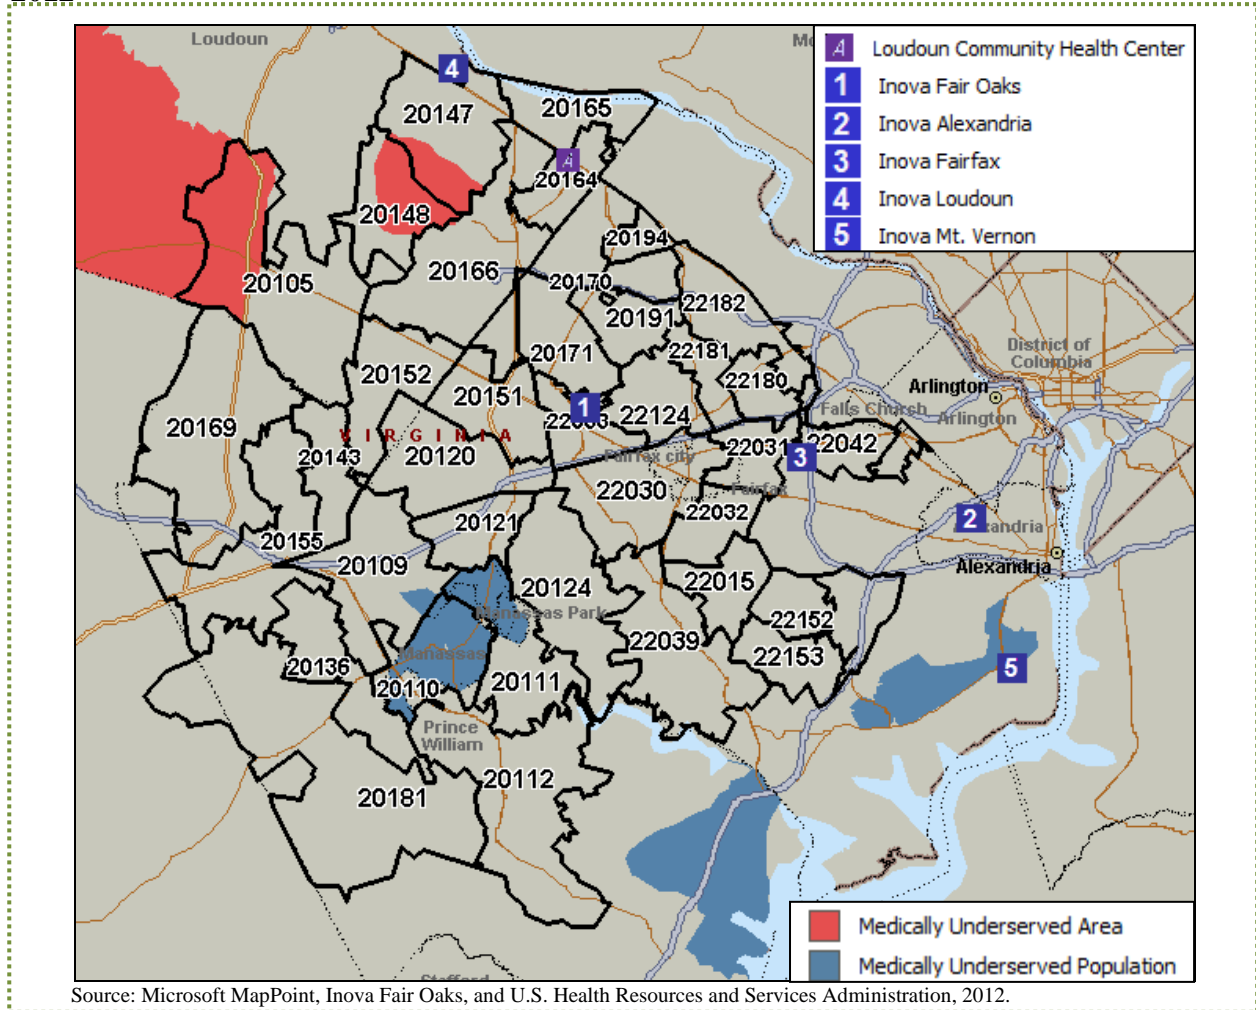

Any area or population receiving an IMU score of 62.0 or less qualifies for Medically Underserved Area (MUA) or Medically Underserved Population (MUP) designation. Federally Qualified Health Centers (FQHCs) may be established to serve MUAs and MUPs. Populations receiving MUP designation include groups within a geographic area with economic barriers or cultural and/or linguistic access barriers to receiving primary care. When a population group does not qualify for MUP status based on the IMU score, Public Law 99-280 allows MUP designation if “unusual local conditions which are a barrier to access to or the availability of

<sup>23</sup> U.S. Health Resources and Services Administration. (n.d.) *Guidelines for Medically Underserved Area and Population Designation*. Retrieved 2012, from <http://bhpr.hrsa.gov/shortage/muaps/index.html>.

personal health services exist and are documented, and if such a designation is recommended by the chief executive officer and local officials of the State where the requested population resides.”<sup>24</sup>

**Exhibit 57** shows areas designated by HRSA as medically underserved. Loudoun County, Manassas City, Manassas Park City, and Prince William County contain MUAs and MUPs. Fairfax County recently submitted an application for MUP status that was approved by HRSA.

**Exhibit 57: Location of Federally Designated Areas in the Inova Fair Oaks Community, 2012**

<sup>24</sup> *Ibid.*

## Health Professional Shortage Areas

A geographic area can receive a federal Health Professional Shortage Area (HPSA) designation if a shortage of primary care, dental care, or mental health care professionals is found to be present.

In addition to areas and populations that can be designated as HPSAs, a facility can receive federal HPSA designation and a resultant, additional Medicare payment if it provides primary medical care services to an area or population group identified as having inadequate access to primary care, dental, or mental health professionals and service capacity.

HPSAs can be: “(1) An urban or rural area (which need not conform to the geographic boundaries of a political subdivision and which is a rational area for the delivery of health services); (2) a population group; or (3) a public or nonprofit private medical facility.”<sup>25</sup>

In the Inova Fair Oaks community, the Loudoun Community Health Center is designated as primary care, mental, and dental health HPSA and has a location in Sterling, VA (ZIP code 20164) (**Exhibit 57**).

## Description of Other Facilities and Resources within the Community

The Inova Fair Oaks community contains a variety of resources that are available to meet the health needs identified in this CHNA. These resources include clinics, hospitals, health professionals, and other agencies and organizations.

One facility in the Inova Fair Oaks community is designated as primary medical care, mental health, and dental HPSA; it is also designated as a Federally Qualified Health Center. The Loudoun Community Health Center, with locations in Leesburg (ZIP code 20176) and Sterling (ZIP code 20164), provides pediatric and adult medicine, ob/gyn, mental health, prenatal care, and lab services to the uninsured and underinsured. Dental care and specialty care are provided through referral agreements and community partners. The health center is open six days per week.<sup>26</sup>

Every jurisdiction, except Manassas Park City, contains at least one hospital facility (**Exhibit 58**).

Source: The Virginia Department of Health Office of Licensure and Certification Directory of Inpatient Hospitals and Outpatient Surgical Centers in Virginia, and the CMS Impact File, 2012.

Ambulatory surgery centers appear in **Exhibit 5** because Virginia licenses these sites as “outpatient hospital” facilities.

Federally Qualified Health Centers (FQHCs) were created by Congress to promote access to ambulatory care in areas designated as “medically underserved.” These clinics receive cost-based reimbursement for Medicare and many also receive grant funding under Section 330 of the Public Health Service Act. FQHCs also receive a prospective payment rate for Medicaid services based on reasonable costs.

There is one FQHC, which is also a HPSA, located in the Inova Fair Oaks community. The Loudoun County Community Health Center has locations in Leesburg (ZIP code 20176) and Sterling (ZIP code 20164). The main campus in Leesburg is relocating to a new facility in October 2012, and they recently received a grant to open a new site in Herndon, in Fairfax County.

**Exhibit 59** presents the number of primary care physicians, mental health providers, and dentists per 100,000 population. The number of professionals available on a per-capita basis is well below Virginia averages in several areas served by Inova Fair Oaks Hospital.

## Exhibit 59: Health Professionals Rates per 100,000 Population by Jurisdiction

Jurisdiction	Primary Care Physicians*		Mental Health Providers*		Dentists*	
	Number	Rate per 100,000	Number	Rate per 100,000	Number	Rate per 100,000

\*Primary care physicians data is from 2009; data regarding mental health providers and dentists is from 2007.

\*\*Number of dentists in Virginia calculated by Verité.

As of 2012, a range of other agencies and organizations are available in each jurisdiction to assist in meeting health needs, including county health departments and human services departments.

Some of these include:

- Two Federally Qualified Health Centers, the Loudoun Community Health Center and the Greater Prince William Community Health Center;
- The Fairfax County, Loudoun County, and Prince William County health departments and their associated clinics;
- Free clinics and other clinics that serve underserved populations, including the Jeannie Schmidt Free Clinic (which merged with Loudoun Community Health Center in Fall 2012), Mission Life Center Hope Clinic, Loudoun Free Clinic, Prince William Area Free Clinic, Lions Eye Clinic, and the Northern Virginia Dental Clinic;
- InovaCares initiatives including InovaCares Clinic for Children, InovaCares Clinic for Women, and Inova Juniper Program (which serves clients with HIV/AIDS);
- Low cost prescription services such as the Fairfax County Prescription Discount Card and Nova Scripts Central;
- The Fairfax-Falls Church, Loudoun County, and Prince William County Community Services Boards (which serve clients who are mentally ill);
- One Fairfax County Community Health Center Network (CHCN) location (which serve low-income, uninsured patients); and
- The Reston Hospital Center and Prince William Health System.

The Inova Juniper Program soon will be opening a clinic in Leesburg. This site will provide transitional care for patients without a primary care physician who are discharged from the hospital with diabetes, congestive heart failure, chronic obstructive pulmonary disease, and/or asthma. This clinic is a level 3 recognized patient centered medical home (PCMH).

Lists of available resources also have been compiled by community foundations, clinics, and health departments and can be found at the following websites:

## Findings of Other Recent Community Health Needs Assessments

Verité also considered the findings of other needs assessments published since 2005. Thirteen such assessments have been conducted in the Inova Fair Oaks area and are publicly available. Summary findings from these assessments are provided below, with the most recent presented first.

### 1. The Commonwealth Institute for Fiscal Analysis

In 2012, the Commonwealth Institute for Fiscal Analysis published a report entitled *Under Pressure: The State of Working Northern Virginia*.<sup>27</sup> That report provided an overview of data regarding the economic well-being of Northern Virginia, with a particular focus on the challenges faced by low and moderate-income residents.

The following key findings are relevant to Northern Virginians' ability to access care:

- Median income levels declined disproportionately in Northern Virginia from 2007 to 2010; lower-income households saw a decline more than three times that of the region's higher-income households.
- The cost of living in the region is high, placing further strain on lower-income residents. In 2010, a family of four living in Northern Virginia (assuming one pre-school aged child and one school-aged child) required an income ranging from approximately \$51,000 in Fauquier County to nearly \$67,000 in Loudoun County to meet a minimum standard of living.
- From 2007 to 2012, enrollment in public assistance services increased. Most notably, the number of people enrolled in the Supplemental Nutrition Assistance Program (SNAP) increased 131 percent in the region compared to a 77 percent increase in Virginia as a whole.

### 2. The George Mason University College of Health and Human Services

In 2012, George Mason University published a report entitled *Recommendations to the Fairfax County Health Care Reform Implementation Task Force*.<sup>28</sup> This report summarized Fairfax County's health status and healthcare resources as context for the consideration of options for responding to the recent federal health reform law.

Health status and healthcare access findings in the report are as follows:

- Although Fairfax County as a whole is comparatively wealthy and asset-rich, inequalities exist in health status and healthcare access, particularly for low-income populations and

---

<sup>27</sup> The Commonwealth Institute (May 2012) *Under Pressure: The State of Working Northern Virginia*. Retrieved 2012, from [http://www.thecommonwealthinstitute.org/wp-content/uploads/2012/05/120508\\_under\\_pressure.pdf](http://www.thecommonwealthinstitute.org/wp-content/uploads/2012/05/120508_under_pressure.pdf)

<sup>28</sup> George Mason University (March 2012) *Recommendations to the Fairfax County Health Care Reform Implementation Task Force*. Retrieved May 2012, from <http://chpre.org/wp-content/uploads/2012/04/Final-GMU-Fairfax-County-FINAL-Report-4-3-12.pdf>

racial and ethnic minorities in the Richmond Highway Corridor, Bailey's Crossroads-Culmore area, and the Reston-Herndon area.

- The number of families living at or below 200 percent of poverty increased 33 percent from 2000-2009.
- The high cost of living in the county particularly has affected those living on low or fixed incomes.
- Mortality rates, teen pregnancy, low birth weights and infant mortality rates, cancer, high blood pressure, and communicable disease rates were highest for Black residents.
- Thirteen percent of Fairfax County residents lacked health insurance in 2010. Eight percent of children five years of age and younger lived in poverty.
  - Hispanic residents are most likely to be uninsured. This group accounts for 30 percent of the total uninsured population in the county.
- An estimated 23 percent of the uninsured population was served by Fairfax County's safety net providers, specifically the Community Service Boards (CSBs) and Community Health Care Network (CHCN) clinics. Roughly 40 percent of the uninsured population seeks care each year.
- Approximately half of the county's uninsured population may gain insurance coverage as a result of healthcare reform; at least half of those individuals will obtain private coverage rather than Medicaid. The county's safety net services can be instrumental in maintaining access to care during this transition.
- The area is expecting a shortage of primary care physicians in coming years. Thirty-nine percent of the county's primary care physicians were 60 years of age or older in 2010 and are anticipated to retire within the next few years. Few new physicians are electing primary care.
  - The area lacked sufficient physicians and specialists to treat low-income, Medicare, and Medicaid patients. Dental health professionals, as well as physicians who serve children, the chronically ill, the elderly, and those with disabilities, will be in greatest demand in upcoming years. The area especially lacked mental and behavioral health providers, regardless of insurance status. These problems will be compounded when the health reform law takes effect.
- Fairfax County care providers need to collaborate to improve access to services. The development and implementation of information technology is recommended to support integrated service delivery, administrative functions, and coordination among providers.
- The community would benefit from an outreach campaign to educate residents about new coverage options and services.

### 3. The Loudoun County Board of Supervisors

In March 2012, the Loudoun County Board of Supervisors approved an action item entitled *Loudoun Lyme Disease Prevention and Awareness*.<sup>29</sup> Data presented in this action item include:

- Eighteen percent of Lyme disease cases reported in Virginia in 2011 were from Loudoun County.
- Lyme disease is underreported due to frequent misdiagnosis and administrative burden.
- Many other infections can be transmitted alongside Lyme disease by ticks.

### 4. Fairfax County Department of Neighborhood and Community Services and Fairfax County Public Schools

The *School Year 2011-2012 Fairfax County Youth Survey*<sup>30</sup> was developed collaboratively by the Fairfax County Public Schools and Department of Neighborhood & Community Services. This survey, administered on a confidential basis to students in grades six, eight, ten, and twelve, offers insight into youth behaviors and trends in substance abuse, mental health, violence and delinquency, overall health status, and health risk behaviors.

Summary findings from the most recent survey are listed below:

- Alcohol was the most commonly used substance among Fairfax County youth, but the prevalence of students who used alcohol in the last month (22 percent) was lower than the national average. Twelfth graders reported the highest percentage of alcohol use at 37 percent.
- Approximately four percent of eighth graders reported using inhalants in the past month compared to one percent in twelfth grade. Twenty percent of twelfth graders reported using marijuana. This is more than five times the rate reported by eighth graders.
- Thirty-two percent of students reported experiencing depression in the past year. Females and Hispanics were more likely to experience depression.
- Twenty-six percent of Fairfax County youth reported eating five servings of fruits and vegetables per day, almost twice the national average.
- Thirteen percent of females reported engaging in one hour or more of physical activity for at least seven days per week compared to 28 percent of males. Physical activity levels decrease with students' age.
- Fifty-one percent of students reported being bullied in the past year. Bullying was most prevalent in eighth and tenth grades.

---

<sup>29</sup> Loudoun County Board of Supervisors. (March 2012). *Loudoun Lyme Disease Prevention and Awareness*.

<sup>30</sup> Fairfax County Public Schools and Department of Neighborhood & Community Service. (September 2011) *School Year 2011-2012 Fairfax County Youth Survey*. Retrieved 2012, <http://www.fairfaxcounty.gov/demogrph/youthpdf.htm>

- Two-thirds of youth who report being sexually active also report using a condom. Twenty percent of students report having ever had sex. Black and Hispanic students are more likely to have had sex than other groups, at 30 and 32 percent, respectively.
- Female students had a higher likelihood of considering committing suicide, at 20 percent, compared to males at 12 percent.

## 5. Northern Virginia Health Foundation

In September of 2011, the Northern Virginia Health Foundation commissioned a report entitled *Oral Health in Northern Virginia*.<sup>31</sup> That report provided a region specific analysis on oral health needs based on a literature review and a survey of residents in the region. The survey covered residents from Arlington, Fairfax, Loudoun, and Prince William counties as well as the cities of Alexandria, Fairfax, Falls Church, Manassas, and Manassas Park.

Findings show that lower-income people in Northern Virginia face barriers to accessing dental care and have comparatively poor oral health:

- In Northern Virginia, more than a third of those in lower-income households (making less than \$40,000 per year) rated their oral health as fair or poor. The percentage was much lower for those in households making over \$40,000 per year.
- Virginia as a whole scored poorly on its ability to address children’s oral health needs, according to a *The State of Children’s Dental Health: Making Dental Coverage Matter*, a report by the Pew Center on The States. Approximately 48 percent of children enrolled in Virginia Medicaid’s “Smiles for Children” program received no dental services at all in 2009. Benefits for adults enrolled in Medicaid are limited to medically necessary oral surgery.
- There are organizations throughout Northern Virginia that provide dental care for low income and uninsured individuals, but waiting lists remained full, and more than 300 patients typically are waiting for care.
- The report identifies barriers to accessing dental care including: low income levels, high costs of care, lack of transportation, a lack of access to dental insurance, and a lack of access to dentists who are able to treat the handicapped or those with special needs.
- Only about 24 percent of lower-income adults with physical health coverage also have dental health coverage. Typically 64 percent of insured, higher-income individuals had dental coverage.
- Lower-income residents were more likely to seek hospital emergency room care for acute dental problems. Almost five times as many lower-income residents had received emergency room care in the last two years compared to higher-income residents.

---

<sup>31</sup>Northern Virginia Health Foundation (September 2011) *Oral Health in Northern Virginia*. Retrieved 2012, from <http://novahealthfdn.org/wp-content/uploads/NVHF-OralHealth-Report-FINAL.pdf>

- Nearly 45 percent of lower-income parents had not been able to afford dental care for their children in the last two years. Only about 62 percent of low-income parents had taken their children to the dentist in the last two years, compared to 79 percent of the higher-income parents.
- Higher percentages of lower-income adults had dentures and report waiting to get a tooth pulled, compared to higher-income adults.
- Only about 35 percent of lower-income women saw the dentist for basic checkups while pregnant, compared to two thirds of higher-income women.
- Almost 23 percent of lower-income women had gum or teeth related problems during pregnancy compared to three percent of higher-income women.

## 6. Partnership for a Healthier Fairfax MAPP Report

The *Community Health Status Assessment Report*,<sup>32</sup> published by the Partnership for a Healthier Fairfax in September 2011, provided an overview of the health and wellbeing of Fairfax County. Partnership for a Healthier Fairfax utilized the Mobilization for Action through Planning and Partnerships (MAPP) process to identify public health issues. The regions that were included in this study are Fairfax County, the City of Fairfax, the City of Falls Church, and the subregions of Herndon, Clifton, and Vienna.

Key problem area categories included:

### 1. Income Disparities

- While Fairfax County was one of the most affluent areas in the US, the number of residents living in poverty increased 33 percent from 2000-2009.
- In 2009, six percent of individuals were living in poverty.
- Reston, Herndon, Bailey's Crossroads-Culmore, Central Fairfax, and the Richmond Highway corridor had a high percentage of people living in poverty.

### 2. Access

- More than one out of every 10 residents of the county lacked health insurance in 2009, though more residents were likely to have health insurance than the US average.
- Virginia's eligibility criteria for Medicaid were between 80 percent and 133 percent of FPL, depending on the program; eligibility criteria for SCHIP were less than 185 percent of FPL. Additionally, many primary care physicians were unwilling to accept new Medicaid patients due to reimbursement and other concerns.

---

<sup>32</sup>Partnership for a Healthier Fairfax (September 2011) *Community Health Status Assessment Report*. Retrieved 2012, from <http://www.fairfaxcounty.gov/hd/mapp/pdf/comm-health-assessment.pdf>

- Fairfax County is anticipating a shortage of primary care physicians, nurses, and specialists due to the number of physicians reaching retirement age. New physicians entering the medical profession are less likely to elect primary care, and those who do choose a primary care practice are not entering at a rate fast enough to replace those who are leaving. Providers willing and able to serve children, the chronically ill, the elderly, and those with disabilities and/or mental disorders will be in greatest demand.

### 3. Health Behaviors

- Fifty-four percent of Fairfax County's adult population was physically inactive. The county benchmarks poorly on this indicator compared to other areas of Virginia.
- Seventy-two percent of residents ate fewer than five servings of fruits and vegetables daily.
- Fifty-two percent of county residents were overweight or obese.
- Alcohol was the most commonly abused substance for individuals under the age of 18.
- Twenty percent of the Fairfax County population suffered from high blood pressure.

### 4. Housing

- The cost of living in Fairfax County was high. The county is among the most expensive areas in the nation for housing. The elderly and low-income populations were burdened by housing costs.

### 5. Mental Health

- Fairfax Public Schools reported a rate of depression that was higher than the national average. Suicide was one of the leading causes of death among youth and young adults in Fairfax County.

### 6. Infectious Disease

- Tuberculosis rates were more than two times higher than Virginia and national averages.

### 7. Environment

- Air quality was ranked as the poorest in Virginia.
- Initiatives to improve public transportation lagged behind need.
- Most marine and freshwater recreational waters in Fairfax County failed to meet water quality regulations and guidelines.
- Fairfax County saw significant increases in the number of reported cases of Lyme disease since 2000. Fairfax County's rate of 25 cases per 100,000 persons was more than double the Virginia rate.

- Incidence of animal rabies in Fairfax County consistently was one of the highest out of all Virginia counties between 2000 and 2009.
- In 2009, 13 times as many Lyme disease cases were reported than were reported in 2000.

## **7. Prince William Area Coalition for Human Services and Prince William United Way, 2011**

In 2011, the Prince William Area Coalition for Human Services and Prince William United Way published the *Greater Prince William County Community Needs Assessment*<sup>33</sup> with the goal of improving the quality of life in Prince William County and the cities of Manassas and Manassas Park.

Key areas of need were:

- An increase in financial hardship has forced residents to choose between meeting basic needs such as food, shelter, and utilities, and obtaining healthcare. In 2009, six percent of Prince William County residents lived in poverty.
- The community had a higher rate of uninsurance compared to peer counties and a lower rate of primary care physicians. The community would benefit from an increase in safety net services, but funding for such services has been limited.
- The community was in need of supportive housing and transportation, especially for the disabled, elderly, and low-income populations.
- Seniors required increased access to affordable in-home care, chronic disease management, and mental health services.
- Teen pregnancy rates and preventable hospital stays benchmarked unfavorably in the Greater Prince William County area compared to peer counties.
- The number of suicides in the area had been increasing since 2006.
- Investments in public libraries, health services programs and other initiatives have been made to serve youth in the county. The physical infrastructure and funding for sports fields and parks, transportation services, and youth programs were lacking in the county.

---

<sup>33</sup> Prince William Area Coalition for Human Services and Prince William United Way (2011) Greater Prince William County Community Needs Assessment. Retrieved 2011, from [http://www.pwchs.org/Docs/2011\\_greater\\_prince\\_william\\_report.pdf](http://www.pwchs.org/Docs/2011_greater_prince_william_report.pdf)

## 8. Virginia Department of Health

The Virginia Department of Health's Office of Minority Health and Public Health Policy published a report in 2011 entitled *Inequities in Birth Outcomes in Northern Virginia*.<sup>34</sup> That report sought to educate the community regarding the causes and effects of birth and infant health inequities while proposing frameworks to address these inequities.

The following disparities were identified in the report:

- Northern Virginia had lower rates of infant mortality and low birth weight infants than the commonwealth and nation in 2006. However, the rates for Black infant mortality and low birth weight were significantly higher than White or Hispanic rates.
- In Northern Virginia in 2006, the infant mortality rate was highest for Black residents at 10.4 deaths per 1,000 live births; White residents experienced 4.1 deaths per 1,000 live births and Hispanic (or Latino) residents experienced 3.6 deaths per 1,000 live births.
- In 2006, the infant mortality rate in Northern Virginia decreased as years of education increased. However, this was least pronounced for Black residents whose rates stayed higher than rates for non-Black residents at all education levels.

## 9. The Center for Nonprofit Development and Pluralism (Washington AIDS Partnership)

In 2010, The Center for Nonprofit Development and Pluralism developed a report funded by the Washington AIDS Partnership and Kaiser Permanente, entitled *The Profiles Project: How the Washington, DC Suburbs Respond to HIV/AIDS*.<sup>35</sup>

Important findings include:

- Black residents accounted for 48 percent of those living with HIV/AIDS in Northern Virginia; males accounted for 75 percent of those living with HIV/AIDS.
- Portability of care, defined as having the “ability to obtain HIV-related services from the same provider if s/he moves across jurisdictions within the eligible metropolitan area,” is lacking in the region.

## 10. Loudoun County Health Department

In 2009, the Loudoun County Health Department published a report entitled *Loudoun County, Virginia Community Health Status Assessment*.<sup>36</sup> The Loudoun County Health Department also utilized the Mobilization for Action through Planning and Partnerships (MAPP) process to identify public health issues.

The results of that assessment are listed below:

- Loudoun County was ranked as the fourth best in the nation of the top 25 counties for job growth in 2008. Its unemployment rate in 2009 was at four percent, lower than regional, Virginia, and national averages.
- While many health services are available in the community, distance and transportation are issues for many residents, especially in the western portion of the county.
- Twelve percent of the community was uninsured.
- Ninety-four percent of residents were high school graduates and 53 percent have a bachelor's degree or higher.
- Alcohol abuse was a significant issue for youth. Fifty-four percent of students reported drinking alcohol in their lifetime.
- Air and water quality were environmental concerns in Loudoun County.
- The cancer mortality rate in Loudoun County at 27 percent was higher than regional, Virginia, and national averages.
- Incidences of Lyme disease, chlamydia, gonorrhea, and hepatitis-C had increased significantly since 2006.

## 11. Metropolitan Washington Council of Governments and Washington Regional Association of Grantmakers

The *Community Health Status Indicators for Metropolitan Washington, 2009*,<sup>37</sup> published collaboratively by the Health Officials Committee of the Metropolitan Washington Council of Governments and the Health Working Group of the Washington Regional Association of Grantmakers, examined the health status of the region's residents with a particular focus on the social determinants of health.

---

<sup>36</sup> Loudoun County Health Department (July 2009) *Loudoun County, Virginia Community Health Status Assessment*. Retrieved 2011, from <http://inter4.loudoun.gov/controls/speerio/resources/RenderContent.aspx?data=613306896ccb4d7391a0248c4b99bc00&tabid=340&fmpath=%2FHealth+Check>

<sup>37</sup> Metropolitan Washington Council of Governments & Washington Regional Association of Grantmakers. (June 2009) *Community Health Status Indicators for Metropolitan Washington, 2009*. Retrieved 2012, from <http://www.mwcog.org/uploads/publications/zVZdWA20090623085814.pdf>

The assessment included the following areas in the Metropolitan Washington region: Frederick, Montgomery, and Prince George's counties in Maryland, the counties of Arlington, Fairfax, Loudoun, and Prince William and cities of Alexandria, Fairfax, Falls Church, Manassas, and Manassas Park in Virginia, and the District of Columbia.

Key findings are as follows:

- The percentage of low-income adults who were uninsured was over 50 percent in all Virginia jurisdictions. Arlington County had the highest at 73 percent.
- In the city of Fairfax and the counties of Fairfax and Prince William, 12 to 15 percent of the population over five years of age did not speak English well.
- Fairfax, and Prince William counties and the cities of Fairfax, Falls Church, Manassas, and Manassas Park reported higher percentages of women not receiving prenatal care than the goal established by the federal government in Healthy People 2010.
- All jurisdictions reported breast cancer mortality rates higher than the Healthy People 2010 goal. The counties of Loudoun and Prince William, and the cities of Fairfax and Falls Church reported rates over the national average.
- Prince William County reported the highest number of mental or physical unhealthy days of the regions.
- Black infant mortality rates were higher than the national average in Prince William County and Manassas City.
- Stroke death rates in Manassas and Manassas Park cities were 87 and 95 per 100,000 population, respectively, compared to a national average of 53 per 100,000 population.
- Fairfax and Falls Church cities had motor vehicle injury death rates that were significantly higher than the national average of 15 per 100,000 population.
- Fairfax City had the highest suicide rate of all jurisdictions at 13 per 100,000 population compared to a national average of 11.
- The tuberculosis rate in Fairfax County was more than twice the national average.
- Over 15 percent of the population reported being obese in Fairfax, Loudoun, and Prince William counties and the city of Manassas. In the jurisdictions with available data, 67 percent or more adults do not eat five or more fruits and vegetables per day.
- Higher percentages of residents reported being current smokers in Prince William County and the city of Manassas compared to peer jurisdictions.

## 12. Voices for Virginia's Children

In 2009, Voices for Virginia's Children<sup>38</sup> compiled data from the surveys conducted in secondary schools in Northern Virginia, including data from the *Fairfax County Youth Survey* conducted by the Fairfax County Department of Neighborhood and Community Services and Fairfax County Public Schools. Surveys were conducted in Arlington, Fairfax, and Loudoun counties, and in the City of Alexandria.

Findings about youth health risk behaviors include the following:

- Although lower than the national averages, alcohol was the most commonly abused substance. In Fairfax County, 27 percent of 10<sup>th</sup> and 43 percent of 12<sup>th</sup> grader consumed alcohol in the last month. In Loudoun County, 31 percent of 10<sup>th</sup> and 43 percent of 12<sup>th</sup> graders consumed alcohol in the last month.
- Although lower than the national averages, marijuana was the most abused illicit drug in this region. In Fairfax County, nine percent of 10<sup>th</sup> graders and 17 percent of 12<sup>th</sup> graders used marijuana in the last month. In Loudoun County, 13 percent of 10<sup>th</sup> graders and 17 percent of 12<sup>th</sup> graders used marijuana in the last 30 days.

## 13. Prince William Area Coalition for Human Services and Prince William United Way, 2005

*The 2005 Hispanic Needs Assessment Report*,<sup>39</sup> published by the Prince William Area Coalition for Human Services and Prince William United Way, assessed data from a community survey and two focus groups to identify the unique needs of the Hispanic population in the Greater Prince William area. That area includes Prince William County and the cities of Manassas and Manassas Park.

Key findings included:

- Access to, as well as utilization and awareness of, available services were major concerns for the Hispanic (or Latino) population.
  - The assessment identified a need for an integrated, culturally competent community system that supports, values, and respects Hispanic (or Latino) families.
  - More information should be disseminated in Spanish through multiple communication outlets.
  - The community also lacked access to a sufficient number of culturally competent and linguistically capable health professionals.

---

<sup>38</sup> Voices for Virginia's Children (July 2009) *Self-Portrait of Youth in Northern Virginia*. Retrieved July 7, 2012, from [http://vakids.org/pubs/NoVA/YouthSurvey\\_Web.pdf](http://vakids.org/pubs/NoVA/YouthSurvey_Web.pdf).

<sup>39</sup> Prince William Area Coalition for Human Services. (May 2005) *2005 Hispanic Needs Assessment Report – Greater Prince William Area*. Retrieved 2011, from [http://www.pwchs.org/Docs/English\\_Report\\_Hispanic\\_Needs%20Assessment\\_%20V30.pdf](http://www.pwchs.org/Docs/English_Report_Hispanic_Needs%20Assessment_%20V30.pdf)

- In 2004, over 14 percent of the community’s population was Hispanic (or Latino). A high percentage of this population is low income and required assistance meeting basic needs such as food and housing.
  - Eight percent of households received food stamps, 10 percent were without food, and 16 percent of households received reduced price lunches.
  - Thirty-eight percent of households occasionally ran out of money for basic needs in the past 12 months.
- Nationally, 34 percent of the Hispanic (or Latino) population was uninsured in 2004.
  - Twenty-five percent of respondent households had been without medical care and 54 percent had problems getting healthcare, mostly, 73 percent, due to financial constraints.
  - In 2004, 30 percent of households had gone without needed dental care or knew someone who did.
  - In 2005, 22 percent of respondents received Medicaid.
- The Hispanic (or Latino) community needed life skills education such as English as a second language instruction, banking and credit education, and parenting classes. Local ESL classes were at capacity, some maintaining waiting lists.
- Limited public transportation routes and hours have impeded this population’s access to healthcare services.
- The community lacked affordable childcare. Residents reported difficulty finding childcare providers who spoke their language.
- Local health providers offering free or discounted care were operating at capacity and had long waiting lists.
- There had been a growing need for culturally appropriate domestic violence and substance abuse services in the community.

## Secondary Data Indicators of Concern

This assessment analyzed secondary data regarding demographics, social and economic factors, health behaviors, morbidity, mortality, and physical environment. **Exhibit 60** presents the indicators that appeared most unfavorable in the Inova Fair Oaks community when compared to national, state, or local benchmarks. Further details and discussion regarding these indicators can be found in previous sections.

**Exhibit 60A: Secondary Data Indicators of Concern**

Category	Indicator	Location	Community Value	Benchmark	Data Format	Benchmark Definition

## PRIMARY DATA ASSESSMENT

---

Community input was gathered through interviews and a community web-based survey. Findings from this primary data are presented below.

### Interview Findings

Interviews regarding health needs in the community served by Inova Fair Oaks were conducted with 41 key informants, including external stakeholders (those not affiliated with Inova Fair Oaks or the Inova Health System) and internal Inova staff. The interviews provided input on a wide range of community health issues, including barriers to access to health services, changes in community population, prevalence of certain health conditions, social determinants of health, health disparities, and other topics. The interviews were guided by a structured interview guide, and interviewees were encouraged to identify and discuss all current and emerging issues affecting community health.

Verité staff summarized all interview comments and assessed the frequency with which community health issues were mentioned and also assessed informant views regarding the severity of each concern. The following issues are considered of greatest concern to community health, based on that assessment.

- **Access Issues**
  - **Lack of Affordable Care.** Interviewees expressed concern about the cost of health services for primary care, specialty care, and medication— in particular for community residents who are Hispanic (or Latino), Black, young adults, low-income, uninsured or underinsured, immigrants, or undocumented. This is also an issue for the insured due to high co-pays or deductibles and limited insurance coverage. The current safety net increasingly is resource constrained and unable to meet growing demand. Interviewees report high emergency room utilization by low-income and uninsured populations. Residents in Sterling are most vulnerable to these concerns.
  - **Lack of Access to and Affordability of Insurance.** Health insurance is unaffordable for many lower-income residents. Asian and Hispanic adults are more likely to be uninsured, as are recent immigrants and undocumented people. Interviewees mentioned residents in parts of Loudoun County as being most vulnerable to these concerns.
  - **Lack of Access to and Low Usage of Preventive Care Services.** A number of interviewees raised concerns about access to prevention services, in particular for low-income and undocumented community members. Interviewees mentioned that reimbursement issues affect the amount of preventive care that is provided; affordability affects the amount of preventive care that is utilized. Additionally, many immigrants and young adults are choosing not to access preventive care services or get recommended immunizations.

- **Lack of Collaboration Among Providers.** Interviewees encouraged greater collaboration among providers in the Inova Fair Oaks community. Interviewees noted that there the community lacked “a strong network” and that organizations needed to form alliances and build relationships in order to provide greater coordination of care. Several interviewees mentioned the need for more integration between safety net providers and other hospital, primary care, specialty care, and mental health care providers.
- **Lack of Mental Health Services.** Virtually all interviewees cited a lack of mental health services as a major concern. Regarding mental health services, one interviewee stated that “there is almost none.” Community members who have limited English proficiency experience language barriers when seeking counseling. Veterans returning to the area from war, those who are severely mentally ill, persons requiring inpatient treatment, and children diagnosed with autism are experiencing significant challenges accessing mental health care. Although this was identified as a problem for all age groups and income levels, interviewees mentioned low-income residents as most vulnerable to these concerns. Interviewees reported long waiting lists at safety-net clinics.
- **Lack of Affordable and Accessible Dental Care.** Access to dental care was frequently mentioned and dental insurance is unaffordable for many residents. Such access is particularly problematic for low-income, uninsured, or undocumented adults and for Hispanics or Latinos. Interviewees noted a gap in services for adult Medicaid beneficiaries and those slightly above the poverty line. Existing dental clinics are unable to meet current and growing demand. Residents in the eastern part of Loudoun County and Prince William County are most vulnerable to these concerns.
- **Lack of Providers and Physicians (Including Specialists).** The Inova Fair Oaks area is experiencing an undersupply of physicians despite population growth. Interviewees mention the following types of gaps: primary care physicians and dentists who accept Medicaid, Medicare, and new patients, specialists and psychiatrists willing to provide on-call coverage, endocrinologists, obstetricians for complex cases, and specialists who accept Medicaid (leading to the need to refer specialty care for Medicaid and uninsured people to the University of Virginia). Additionally, there is a need for obstetrics and pediatrics in Prince William County. Interviewees mentioned the low-income, immigrants, homeless, and uninsured/underinsured as most vulnerable to these concerns.
- **Transportation Barriers.** Certain residents of the community also experience access barriers due to transportation problems. These problems have the largest impact on seniors, the low-income, those who need to travel long distances for care, those without automobiles who rely on public transportation, and persons living in the western parts of Fairfax County. Traffic congestion increasingly is affecting access to care, particularly during rush hour. Transportation barriers contribute to high no-show rates as safety net clinics.

- **Morbidity/Health Status Issues**

- **Mental and Behavioral Health.** Poor mental health increasingly is prevalent in the community for children and those suffering from stress, depression, and anxiety. Stigmas prevent certain cultural groups from seeking mental health services.
- **Rates of Obesity/Overweight.** Virtually all informants mention obesity/weight as a major problem area. The prevalence of obesity is highest in low-income, minority populations; culturally-sensitive services are needed. Many interviewees recommended a major focus on children and adolescents.
- **Rates of Diabetes.** Several interviewees expressed concern over the rates of diabetes in children, and the difficulty treating complex patients with co-morbid conditions. Uninsured and underinsured residents who are not eligible for prescription assistance are unable to manage this chronic disease.
- **Rates of Cardiovascular Disease.** Residents expressed concern over growing rates of cardiovascular disease, especially in low-income and minority populations. Poor diet and exercise are contributing factors.
- **Alcohol Use.** Several interviewees mentioned the prevalence of alcohol abuse as problematic, including among higher-income community residents, adolescents, the homeless, and immigrants. Some expressed concern about public drunkenness.
- **Poor Dental Health.** Lack of access to dental services is contributing to poor dental health. The homeless, low-income, and recent immigrants are particularly vulnerable. A lack of dental care for vulnerable populations is “one of the biggest” problems in the community.
- **Smoking.** Residents note high rates of smoking in the Inova Fair Oaks community, especially among teenagers, young adults, and blue collar workers.
- **Poor Diet and Exercise.** Several interviewees mentioned poor diet and exercise as problematic, especially among youth. Access to healthy food is difficult for low-income populations.

- **Social and Economic Issues**

- **Basic Needs Insecurity: Food, Housing, Utilities.** Many interviewees indicated that certain lower-income groups of community residents and immigrants are experiencing problems with access to healthy food and a lack of affordable housing. Residents also noted that there are areas of over-occupied houses and apartments. This issue is particularly problematic in Reston/Herndon.
- **Cultural/Language Barriers.** The area’s immigrant population faces barriers to accessing health and social services. Linguistic isolation and a lack of health system knowledge contribute to these barriers. Many recent immigrants attach a stigma to seeking certain healthcare services, while undocumented residents fear potential repercussions of seeking services.

- **Financial Hardship and Unemployment.** Although the area as a whole is wealthy, pockets of poverty are present. Several interviewees mentioned that low-income residents, as well as ex-offenders, are particularly vulnerable.
- **Lack of Community Health Education.** Interviewees mentioned that many residents are not informed about breastfeeding, chronic disease management, correct usage of medication, and the importance of dental health. Residents suggested that health education programs be aimed toward children, immigrants, and young adults. Additionally, many residents, especially seniors and recent immigrants, lack health literacy and knowledge about how to navigate the health care system.

## Community Survey Findings

Inova Fair Oaks sought input from the public regarding the health of the community through an online survey. The community survey was publicized through mailings and flyers, and a link was made available on the Inova Hospital System’s website to an electronic survey instrument from May through August 2012. The survey consisted of 33 questions about respondent demographics and a range of health status and access issues.

### 1. Respondent Characteristics

A total of 499 residents from the Inova Fair Oaks community completed the survey. The majority of respondents reported being in good or very good overall health, between the ages of 35 and 64, married, employed, Christian, and White. Eighty-five percent of respondents were female and 15 percent were male.

Additional characteristics of the survey participants are as follows:

- The majority (89 percent) of respondents speak English in the home and speak English very well (86 percent). Spanish was the top non-English language reported. Of those respondents who speak a language other than English in the home, 60 percent reported speaking English less than “very well.”
- Forty-one percent of respondents know someone with a disability.
- Approximately four percent of respondents reported being unemployed.

**Exhibit 61** presents the percentage of respondents from each subregion. The subregions with the highest percentage of respondents were East Fairfax 29/50 Corridor and GMU/Burke.

**Exhibit 61: Survey Responses, 2012 – Respondents by Subregion**

Subregion	Percent of Respondents
Ashburn/Arcola	8.6%
Centreville	6.0%
Chantilly	1.0%
Clifton/Fairfax Station	3.8%
East Fairfax 29/50 Corridor	12.8%
Fairfax City	6.8%

*37 of the community's 44 ZIP codes were represented in the survey*

...

*The subregions of East Fairfax 29/50 Corridor and GMU/Burke had the highest percentage of respondents at 13%*

It is important to consider the generalizability of a survey sample. The survey respondents do not adequately represent the diversity of the Inova Fair Oaks community. Accordingly, caution should be used when assessing the data presented below.

**2. Health Issues**

When asked to identify the top health issues in the Inova Fair Oaks community, respondents most often chose obesity, heart disease, and diabetes. Eight percent of the community respondents chose “Other” as a top health issue. Due to the small sample size of Inova Fair Oaks community respondents who chose “Other,” these data are reported based on responses from the Inova Health System as a whole. The most prevalent responses included Lyme disease, “lifestyle issues,” and high blood pressure (**Exhibit 62**).

## Exhibit 62: Survey Responses, 2012 – Top Health Issues

Response	Percent of Respondents*	“Other” Responses	Percent of Responses*
Obesity	77.3%	Lyme disease	17.5%
Heart disease	63.4%	Lifestyle issues	15.0%
Diabetes	59.7%	High blood pressure	12.5%
Cancer	54.0%	Access to care	7.5%
Mental health: depression, bipolar, autism	42.5%	Aging needs	7.5%
Addiction / Substance abuse	26.9%	Disability	6.3%
Asthma	25.5%	Lack of chronic disease management	5.0%
Tobacco use	24.3%	Mental health	5.0%
Alzheimer's or dementia	23.5%	Communicable diseases	5.0%
Stroke	15.4%	Neurology	3.8%
Osteoporosis	8.5%	Allergies	2.5%
Other	7.7%	Oral Health	1.3%
HIV / Sexually transmitted diseases	5.1%	ADHD	1.3%
Birth defects	1.4%	Pediatrics	1.3%
Hepatitis A	0.6%	Auto-immune disorders	1.3%
		Parkinson's	1.3%
		Poverty	1.3%
		Transportation	1.3%
		COPD	1.3%
		Family planning	1.3%
		Cultural barriers to care	1.3%

\*Percentages are based on the number of Inova Fair Oaks respondents who identified top health issues in the community.  
N = 494

\*Percentages are based on the number of “Other” responses received from the Inova Health System respondents as a whole.  
N = 80  
Source: Inova Community Survey, 2012.

### 3. Barriers to Access

The survey included questions about access to and utilization of health services. The majority of participants reported having some form of health insurance, having a usual source of care, and visiting a doctor regularly. Seven percent of respondents reported being uninsured.

**Exhibit 63** identifies the facility or provider at which respondents and their families receive routine medical care. Of those respondents who do not seek routine medical care from a private medical professional, the majority attend urgent care facilities or store-based walk-in clinics. Uninsured respondents are more likely to seek care at a free or low-cost clinic or health center or the emergency room when compared to those with private coverage.

### Exhibit 63: Survey Responses, 2012 – Routine Medical Care

Response	Insurance Coverage		
	All Types	Private Coverage	Uninsured/Medicaid
Private medical professional (MD, APN, PA)	87.7%	95.3%	18.9%
Urgent care facility or store-based walk-in clinic	7.3%	7.2%	10.8%
Free or low-cost clinic or health center	6.7%	0.6%	64.9%
Hospital emergency room	5.2%	2.2%	35.1%
Provider of alternative medicine	4.6%	4.7%	5.4%
Other	4.0%	3.0%	2.7%
No routine medical care received	2.2%	1.1%	16.2%

All Types (N=496), Private Coverage (N=363), Uninsured/Medicaid (N=37).  
Source: Inova Community Survey, 2012.

**Exhibit 64** presents the accessibility of various types of health care. Few respondents had difficulty accessing basic medical care. Survey data indicate that dental care, medical specialty care, and medicine and supplies are less accessible. Fourteen percent of respondents reported rarely or never being able to get needed mental health care – the least accessible of the five health care types.

### Exhibit 64: Survey Responses, 2012 – Able to Get Needed Care

Response	Percent of Respondents				
	Basic Medical Care	Dental Care	Mental Health Care	Medical Specialty Care	Medicine and Supplies
Always	92.7%	85.8%	73.3%	82.3%	86.0%
Sometimes	5.0%	8.7%	12.6%	11.2%	9.9%
Rarely	1.8%	2.8%	4.0%	2.5%	2.9%
Never	0.4%	2.6%	10.1%	4.0%	1.2%

Basic Medical Care (N=496), Dental Care (N=493), Mental Health Care (N=445), Medical Specialty Care (N=481),  
Medicine and Supplies (N=485)  
Source: Inova Community Survey, 2012.

**Exhibit 65** presents the percentage of respondents who reported “always” being able to get needed care by subregion; data indicate that access varies by type of care and locality. A higher percentage of respondents from Manassas West, Manassas East, Reston/Herndon, and Sterling/Dulles reported difficulty accessing care compared to other subregions. Across all subregions, fewer people were able to get mental health care, medical specialty care, and dental care.

### Exhibit 65: Survey Responses, 2012 – Always Able to Get Needed Care by Subregion

Subregion	Percent of Respondents				
	Basic Medical Care	Dental Care	Mental Health Care	Medical Specialty Care	Medicine and Supplies
Ashburn/Arcola	95.2%	88.1%	62.9%	80.5%	80.0%

Key	
Least able to get needed care (bottom 25% of responses)	
Small sample size (N=10 or less)	*

Basic Medical Care (N=496), Dental Care (N=493), Mental Health Care (N=445), Medical Specialty Care (N=481), Medicine and Supplies (N=485)

Source: Inova Community Survey, 2012.

Respondents indicating they are not always able to get care were asked to identify barriers to access (**Exhibits 66 and 67**). Cost and lack of insurance were the two most frequently reported barriers to care.

Data indicate that in general, females had more difficulty getting appointments than males, while males more often cited inconvenient hours, lack of transportation, and lack of trust for basic medical care and mental health care as barriers to access. Females were more likely than males to lack insurance for all care types with the exception of medicine and medicinal supplies (**Exhibit 66**).

**Exhibit 66: Survey Responses, 2012 – Barriers to Care**

Type of Care and Sex	Percent of Respondents								Total Respondents (N)
	Can't Afford It	Can't Get Appointment	Inconvenient Hours	Lack of Transportation	Lack of Trust	Language Barrier	No Insurance	Other

Source: Inova Community Survey, 2012.

**Exhibit 67** presents the responses of residents from the entire Inova Health System who chose “Other” as a barrier to care. Due to the small sample size of Inova Fair Oaks community respondents who chose “Other,” these data are reported based on responses from the Inova Health System as a whole. Sixty-six percent of all “Other” responses stated that residents did not need one or more of the care types listed. The most common “Other” barriers reported include lack of services and in-plan providers for adult and pediatric mental health, difficulty with referrals and care coordination for specialty care, and insufficient health insurance coverage.

**Exhibit 67: Survey Responses, 2012 – “Other” Barriers to Care**

“Other” Responses	Percent of “Other” Responses*
<b>Do Not Need Services</b>	65.5%
<b>Basic Medical Care</b>	
Lack of primary care providers	0.6%
<b>Dental Care</b>	
Lack of in-plan providers	0.6%
<b>Mental Health</b>	
Lack of services and in-plan providers	5.2%
No description	3.4%
Lack of services and in-plan providers for pediatric mental health	2.9%
Insufficient insurance coverage	2.3%
Stigma regarding mental health treatment	1.7%
Difficulty navigating insurance	0.6%
<b>Specialty Care</b>	
Difficulty with referrals/care coordination	2.3%
Lack of services and in-plan providers	1.7%
Lack of convenient appointment times	0.6%
<b>Medicine and Supplies</b>	
Insufficient medication coverage	3.4%
Uninsured	0.6%
Doctor-related prescription issues	0.6%
Pharmacy-related prescription issues	0.6%
Inconvenience	0.6%
<b>General</b>	
Insufficient insurance coverage	2.9%
Difficult for disabled residents to access services and providers	1.1%
Lack of Medicare providers and insufficient coverage	0.6%
Difficulty navigating insurance	0.6%
Lack of providers	0.6%
Uninsured or underinsured	0.6%
No description	0.6%

\*Percentages are based on the number of “Other” responses received from the Inova Health System respondents as a whole.

N= 174

## 4. Health Behaviors

Respondents were asked about health risk behaviors and outcomes as well as the vaccines and screenings they have received.

**Exhibit 68** illustrates the percentage of residents who reported adverse risk behaviors and outcomes. Being overweight and not exercising on a regular basis were the most frequently cited behaviors in the community.

### Exhibit 68: Survey Responses, 2012 – Risk Behaviors

Behaviors	Percent of Respondents	Total Respondents (N)
Overweight	51.7%	(489)
No regular exercise	43.7%	(487)
Former smoker	29.9%	(489)
Children or grandchildren overweight	15.5%	(490)
Current smoker/tobacco user	4.0%	(495)

Source: Inova Community Survey, 2012.

*52% of respondents reported being overweight*

**Exhibit 69** presents the percentage of respondents who reported receiving certain vaccines by sex and age cohort. The percentage of respondents aged 45 and older who received hepatitis A and B vaccines, females aged 15 to 44 who received pneumonia vaccines, and males aged 45+ who received Tdap vaccines compared unfavorably to other cohorts. Fewer than 30 percent of respondents reported receiving human papillomavirus (HPV), meningococcal, varicella, and zoster vaccines.

**Exhibit 69: Survey Responses, 2012 – Vaccines**

Vaccine	Percent of Respondents by Age			
	Males 15-44	Females 15-44	Males 45+	Females 45+
Flu / influenza in the last year	81.8%	81.5%	87.3%	90.5%
Hepatitis A	54.5%	39.5%	23.6%	21.7%
Hepatitis B	54.5%	52.9%	25.5%	41.1%
Human papillomavirus (HPV) before the age of 26	9.1%	12.6%	-	-
Meningococcal	27.3%	21.0%	7.3%	4.6%
MMR (measles, mumps, rubella) if you were born after 1957	63.6%	67.2%	-	-
Pneumonia / pneumococcal	45.5%	14.3%	40.0%	31.2%
Tdap (tetanus, diphtheria, pertussis) every 10 years	54.5%	63.9%	30.9%	56.7%
Varicella (chicken pox) if you've never had chicken pox	18.2%	24.4%	12.7%	10.3%
Zoster (shingles) if you are age 60+	-	-	21.8%	19.8%

Males 15-44 (N = 11), females 15-44 (N = 119), males 45+ (N = 55), females 45+ (N = 236)

Source: Inova Community Survey, 2012.

**Exhibit 70** identifies the percentage of respondents who reported receiving certain health screenings by sex and age cohort. The percentage of females aged 45 and older who were screened for cervical cancer and the percentage of females aged 15-44 who were screened for high cholesterol compared unfavorably to other cohorts. Forty percent or fewer respondents reported being screened for sexually transmitted infections.

### Exhibit 70: Survey Responses, 2012 – Health Screenings

Preventive Screening	Percent of Respondents by Age			
	Males 15-44	Females 15-44	Males 45+	Females 45+
Breast cancer (mammogram) in the last year	-	-	-	86.5%
Colorectal cancer (colonoscopy) in the last 5 years	-	-	76.7%	66.1%
Cervical cancer (Pap test)	-	81.7%	-	56.6%
High cholesterol	90.0%	67.0%	88.3%	81.4%
High or low blood pressure	80.0%	79.8%	91.7%	85.4%
High or low blood sugar	70.0%	61.5%	75.0%	63.9%
Prostate cancer in the last year	-	-	66.7%	-
Sexually transmitted infections	40.0%	35.8%	13.3%	8.0%

Males 15-44 (N = 10), females 15-44 (N = 109), males 45+ (N = 60), females 45+ (N = 274)

## Individuals Providing Community Input

Forty-one key stakeholders participated in the interview process. The 41 stakeholders were comprised of public health experts; individuals from health or other departments and agencies; leaders or representatives of medically underserved, low-income, and minority populations; and other community members (**Exhibits 71, 72, 73, and 74**).

### 1. Public Health Experts

Individuals interviewed with special knowledge of, or expertise in, public health include (**Exhibit 71**):

**Exhibit 71: Public Health Experts Interviewed**

Name	Title	Affiliation or Organization	Special Knowledge or Expertise
Dr. Gloria Addo-Ayensu	Health Director	Fairfax County Health Department	Through her work at the Fairfax County Health Department, Dr. Addo-Ayensu has specialized knowledge of the public health needs of Fairfax County residents.
Anthony Burchard	President	Inova Health System Foundation	Mr. Burchard has special expertise in public health due to his time funding and planning public health programs through Project Hope.
Debra Dever	Executive Director	Loudoun Community Health Center	Through her work at community health centers across the country, Ms. Dever has special knowledge of the public health needs of community health center patients.
Dr. David Goodfriend	Health Director	Loudoun County Health Department	Through his work at the Loudoun County Health Department, Dr. Goodfriend has specialized knowledge of the public health needs of Loudoun County residents.
Dr. Charles Konigsberg, Jr.	Board Vice President	Alexandria Neighborhood Health Services Inc.	Dr. Konigsberg has special expertise in public health through his career in health departments in four states; he is the former Health Director at the Alexandria City Health Department.

## 2. Health or Other Departments or Agencies

Several interviewees were from departments or agencies with current data or other information relevant to the health needs of the Inova Fair Oaks community (**Exhibit 72**). This list excludes the public health experts identified in **Exhibit 71**.

### Exhibit 72: Individuals from Health Departments or Agencies Interviewed

Name	Title	Affiliation or Organization
Janet Clarke	Vice Chair	Loudoun County Board of Supervisors
Rosalyn Foroobar	Deputy Director of Health	Fairfax County Health Department
Ellen Grunewald	Director	Loudoun County Department of Family Services
Scott York	Chairman-at-Large	Loudoun County Board of Supervisors

## 3. Community Leaders and Representatives

The following individuals were interviewed because they are leaders or representatives of medically underserved, low-income, and/or minority populations (**Exhibit 73**). This list excludes the public health experts identified in **Exhibit 71**.

### Exhibit 73A: Community Leaders or Representatives Interviewed

Name	Title	Affiliation or Organization	Nature of Leadership Role
Mary Agee	Executive Director	Northern Virginia Family Services	Mrs. Agee represents the underserved patients who receive services at Northern Virginia Family Services and the low-income workers who are connected with healthcare jobs through the Training Futures program.
George Barker	Senator	Virginia General Assembly	Senator Barker represents vulnerable populations in Northern Virginia who seek public health services.
Dr. Ji-Young Cho	Program Director	Korean Community Service Center of Greater Washington	Dr. Cho serves as a leader of the Asian American community who utilize services and programs through the Korean Community Service Center of Greater Washington.
Janet Clarke	Vice Chair	Loudoun County Board of Supervisors	Ms. Clarke has helped with outreach to youth by establishing a Teen Center in Purcellville and writing Youth Teen Activities Directory for western Loudoun County. She also has experience working in Loudoun County Public Schools.
Rosalyn Foroobar	Deputy Director of Health	Fairfax County Health Department	Dr. Foroobar represents the low-income and uninsured residents receiving health services through the health department.
Brett Fuller	Pastor	Grace Covenant Church	Mr. Fuller represents the residents of Fairfax County that attend Grace Covenant Church.
Denise Garcia	ADA Compliance Administrator	Inova Health System	Ms. Garcia represents populations in Northern Virginia who require resources and facilities that are ADA compliant.
Jean Glossa	Medical Director	Community Health Care Network	Dr. Glossa represents the uninsured receiving needed care through Fairfax County's Community Health Care Network (CHCN).
Ellen Grunewald	Director	Loudoun County Department of Family Services	Dr. Grunewald represents the population that the Loudoun County Department of Family Services assists, including children, adolescents, low-income families, and the elderly.
Andy Johnston	Executive Director	Loudoun Cares	Mr. Johnston represents underprivileged residents receiving services through Project H.O.M.E., Loudoun Cares, and the Loudoun United Way.

### Exhibit 73B: Community Leaders or Representatives Interviewed

Name	Title	Affiliation or Organization	Nature of Leadership Role
Mary Kealy, EDD	Assistant Superintendent for Pupil Services	Loudoun County Public Schools	Dr. Kealy represents children through her work in Loudoun County Public Schools.
Nancy Markley, RN, BSN, NCSN	Supervisor of Student Health Services	Loudoun County Public Schools	Ms. Markley serves as a representative of the students who receive health services at Loudoun County schools.
Nury Marquez	Executive Director	Hispanic Committee of Virginia	Ms. Marquez is an active community leader who represents the Hispanic population in Northern Virginia.
Christina Stevens	Program Director	Community Health Care Network	Ms. Stevens represents the uninsured residents receiving services through the Fairfax County Community Health Care Network (CHCN).
Greg White	COO and Vice President, Programs	Reston Interfaith, Inc.	Mr. White represents residents who receive housing, childcare, food, or financial assistance through Reston Interfaith.
Rod Williams	VP, Community Affairs	Inova Health System	Mr. Williams represents the underserved populations receiving support through Inova's programs that provide nutritional support, healthy habits education, and community based learning.
Dr. Tom Wilson	Executive Director	Northern Virginia Dental Clinic	Dr. Wilson represents vulnerable populations receiving dental care at the Northern Virginia Dental Clinic and at events, such as Mission of Mercy, that help underserved populations receive dental care.

## 4. Persons Representing the Broad Interests of the Community

### Exhibit 74: Other Interviewees Representing the Broad Interests of the Community

Name	Title	Affiliation or Organization
Huey J. Battle	Regional Manager, Community Involvement	Washington Gas Chair, VA Workforce Council
Carl Biggs	Secretary	Inova Health Care Services Board
Marlene Blum	Chairwoman	Fairfax County Health Care Advisory Board
Sharon Bulova	Chairman	Fairfax County Board of Supervisors
Luanne Gutermuth	Vice President of Human Resources & Organization Development	Washington Gas
Ellyn Crawford	Hunter Mill District Rep.	Fairfax County Health Care Advisory Board
Dr. Vera Dvorak	Medical Director for Case Management	Inova Health System
Jack Ebeler	Member	Inova Health Care Services Board
Dr. Loring Flint	Executive Vice President & Chief Medical Officer	Inova Health System
William H. Gary, Sr.	Vice President	Northern Virginia Community College
Kate Hanley	Member	Inova Health Care Services Board
Dr. J. Martin Lebowitz	At-Large	Fairfax County Health Care Advisory Board
Peggy Maddox	Health Administration & Policy Chair/Professor, College of Health & Human Services	George Mason University
Nicole Paulk	VP, Strategic Planning/Innovation	Inova Health System
Dr. Robin Remsburg	Professor and Director, School of Nursing	George Mason University
Rosanne Rodillosso	Dranesville District Rep.	Fairfax County Health Care Advisory Board
Dr. Timothy Yarboro	At-Large	Fairfax County Health Care Advisory Board
Ann Zuvekas	Braddock District Rep.	Fairfax County Health Care Advisory Board
